Oxford University Press, 1992*

This is now the 4th edition of  
Spectrum - The GE Lighting  
Lamp Catalogue.

GE Lighting is constantly  
developing and improving its  
products. For this reason, all  
product descriptions in this  
brochure are intended as a  
general guide, and we may  
change some specifications from  
time to time in the interests of  
product improvement.

#### **General conditions of sale**

GE Lighting products are supplied  
according to the Company's  
General Conditions of Sale.  
If you require a copy of these  
conditions please contact your  
nearest GE Lighting sales office.

#### **Prices**

A price list is available from all  
GE Lighting sales offices.

## There are a lot of good reasons for choosing GE Lighting to meet your lamp requirements

- GE is one of the world's most successful companies, its policies and practices have been adopted throughout the world.
- GE Lighting is one of the largest suppliers of light sources in the world.
- The GE organisation has a worldwide reputation for quality, innovation and market success in a wide range of industries.
- GE Lighting's vision is to be the premier provider of lighting solutions with products, processes and service that is customer focused and quality orientated.
- GE is focused on improving customer productivity and reducing capital outlays, while increasing quality, speed and efficiency through the commercialisation of Six Sigma.
- GE Lighting is intensifying the focus of Six Sigma impacting customers, ensuring that they feel the benefits of this highly successful quality strategy.

*GE is one of the largest companies in the world with a reputation for being the market leader in a majority of the industries in which it operates. This enables us to add value for GE Lighting customers in the form of other services and skills available within the group.*

It is the values of GE as a global company that make a real difference to the quality of the relationship between ourselves and our partners and customers.

## *Quality*

*GE Lighting is constantly driving up standards in lamp manufacturing with the widespread use of the Six Sigma quality strategy, improving reliability for users and reducing maintenance costs.*

## *Commitment*

*In every market where we operate we become a key player through internal investment, strategic alliances and acquisitions - for our customers this means the most innovative products and the most effective support.*

## *Excellence*

*We continue to establish 'Centres of Excellence' for lamp manufacturing, engineering and technological development - delivering advanced products of the highest quality.*

## *Innovation*

*We have an unbroken record of innovation in lamp technology - which enables us to provide customers with high performance, cost-efficient lighting solutions.*

### GE Business Operations

#### **GE Aircraft Engines**

A world leader in quiet, fuel efficient jet engines for use in commercial, marine and industrial aircraft. It also supplies logistical, maintenance/overhaul support and repair services.

#### **GE Appliances**

A global leader in the manufacturing and marketing of major appliances, producing refrigerators, freezers, washing machines, microwave ovens and other appliances under the brands Profile, GE, RCA and Hotpoint.

#### **GE Capital**

Offers financial services in the areas of equipment management, consumer services, mid-market financing, specialized financing and specialty insurance.

#### **GE Industrial Systems**

A global leader offering products and services for various industries ranging from low voltage products and switchgears to industrial controls, drives and AC and DC motors.

#### **GE Information Services**

A leading supplier of global business productivity solutions; EDI; network-based services; databases; translation/desktop software re-engineering; consulting, integration community support and client services.

#### **GE Lighting**

A leading supplier of lighting products for global consumer, commercial and industrial markets.

#### **GE Medical Systems**

A world leader in medical diagnostic imaging technology, constantly innovating better, less invasive treatment through X-ray, magnetic resonance, computerised tomography, ultrasound and network products and services.

#### **NBC**

The leading US television network with cable operations including CNBC and MSNBC, a 24-hour interactive news service in conjunction with Microsoft.

#### **GE Plastics**

A world leader in versatile high-performance engineered plastics used in computer, electronics, automotive and other industries.

#### **GE Power Systems**

A world leader in the design, manufacture and service of gas, steam and hydroelectric turbines and generators.

#### **GE Transportation Systems**

Manufactures more than half of the diesel freight locomotives in North America and its locomotives operate in 75 countries worldwide.

# Our heritage

## *Raising standards in lighting*

*GE Lighting is a direct descendant of the General Electric Company, founded by Thomas Edison, one of the century's most celebrated inventors. Edison applied his unique understanding of electricity to the invention of dynamos, motors, and the world's first phonograph as well as inventing the electric lamp in 1879.*

GE Lighting continues this proud tradition - using the power of science to man's advantage. The company's commitment to continuous innovation can be seen in the record we have of being the first in the world to develop new lamp technologies. As the largest producer of lamps in the world today, we can provide our customers with a wide range of high quality

lamps for all applications. Our focus remains on making lamps that are more efficient and therefore economic to run, whilst also enhancing performance and length of life.

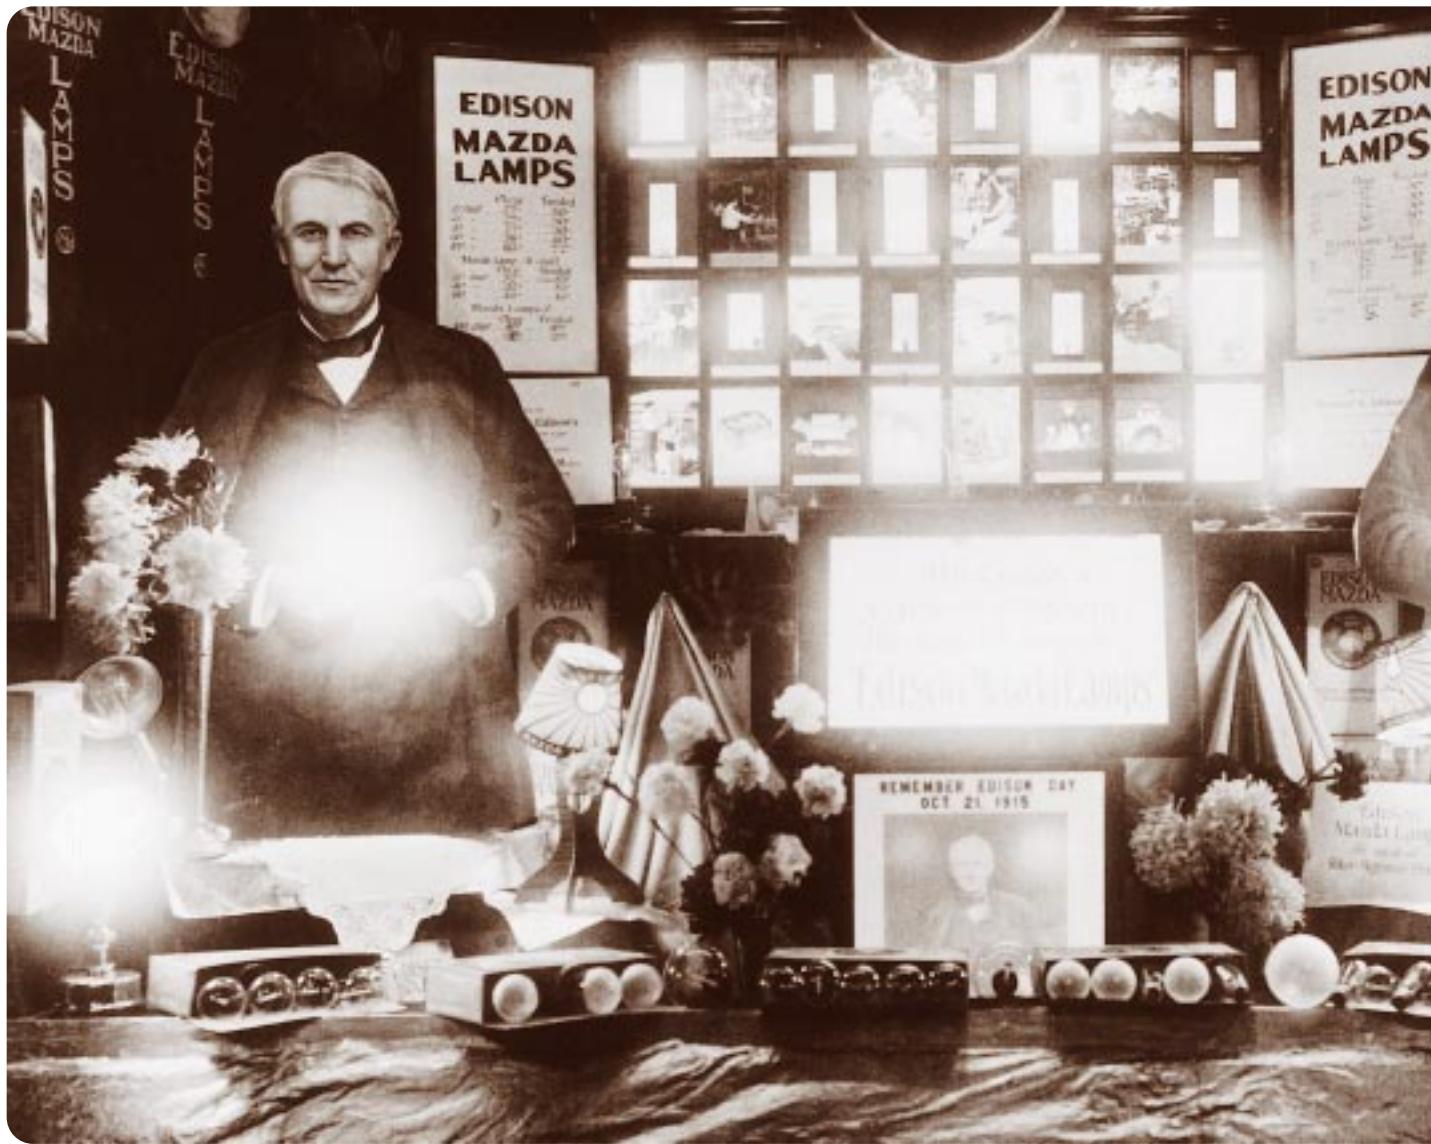

### **GE Lighting - setting new standards in lamp performance.**

- In 1907 GE was the first company to use 'tungsten' - a filament material that was twice as efficient and long-lasting as the earlier carbon-based filaments. The further development of tungsten made durable, vibration resistant lamps for commercial, industrial and transport use possible.
- GE was the first company to develop mercury vapor lamps. The energy efficiency and long life of this lamp type made the first practical outdoor sports and street lighting possible.
- GE was the first to produce fluorescent lamps - a form of lighting that transformed domestic, office and factory lighting.
- GE invented the halogen lamp - a form of bright, white lighting that is now extremely popular in public spaces, homes and offices.

*GE pioneered a majority of the lamp technologies that light our world today.*

*Our focus on continuous improvement of lamp life, output and energy efficiency is delivering substantial benefits to customers all over the world.*

*In over 100 years of developing more effective lamps, GE Lighting has focused consistently on improving the quality of light produced and reducing the cost of light for end users.*

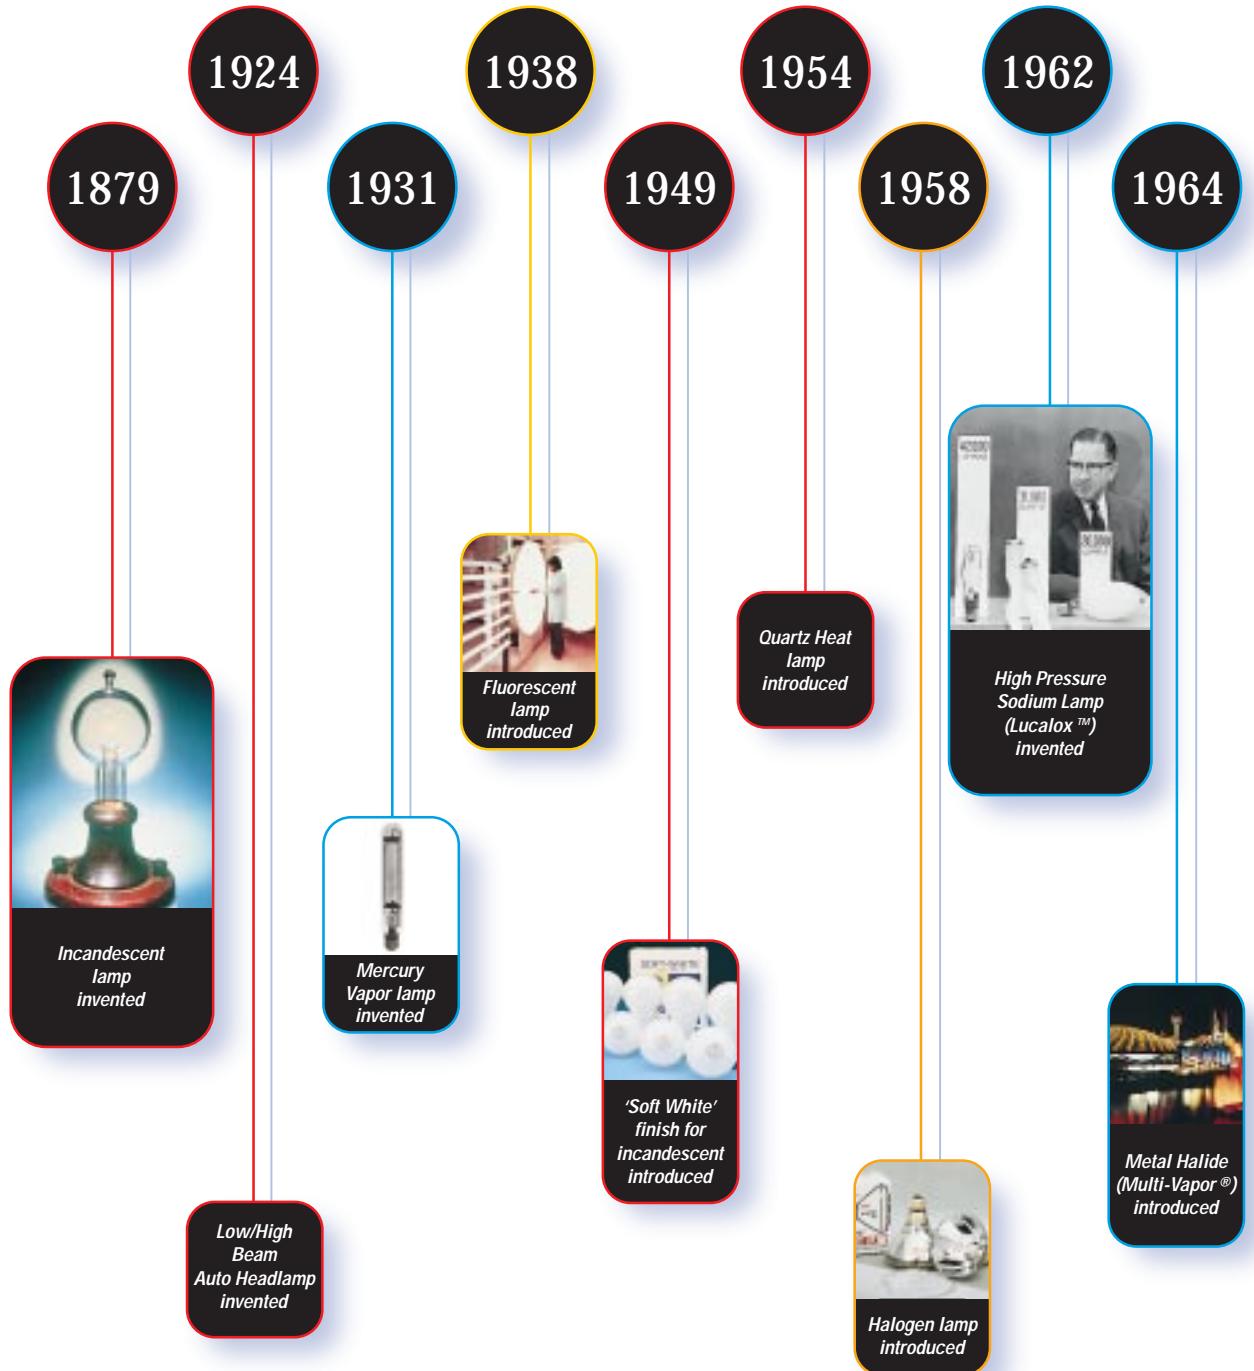

Edison Day window display 1915 at Rikers Drug Store,  
200 Broadway, New York City.

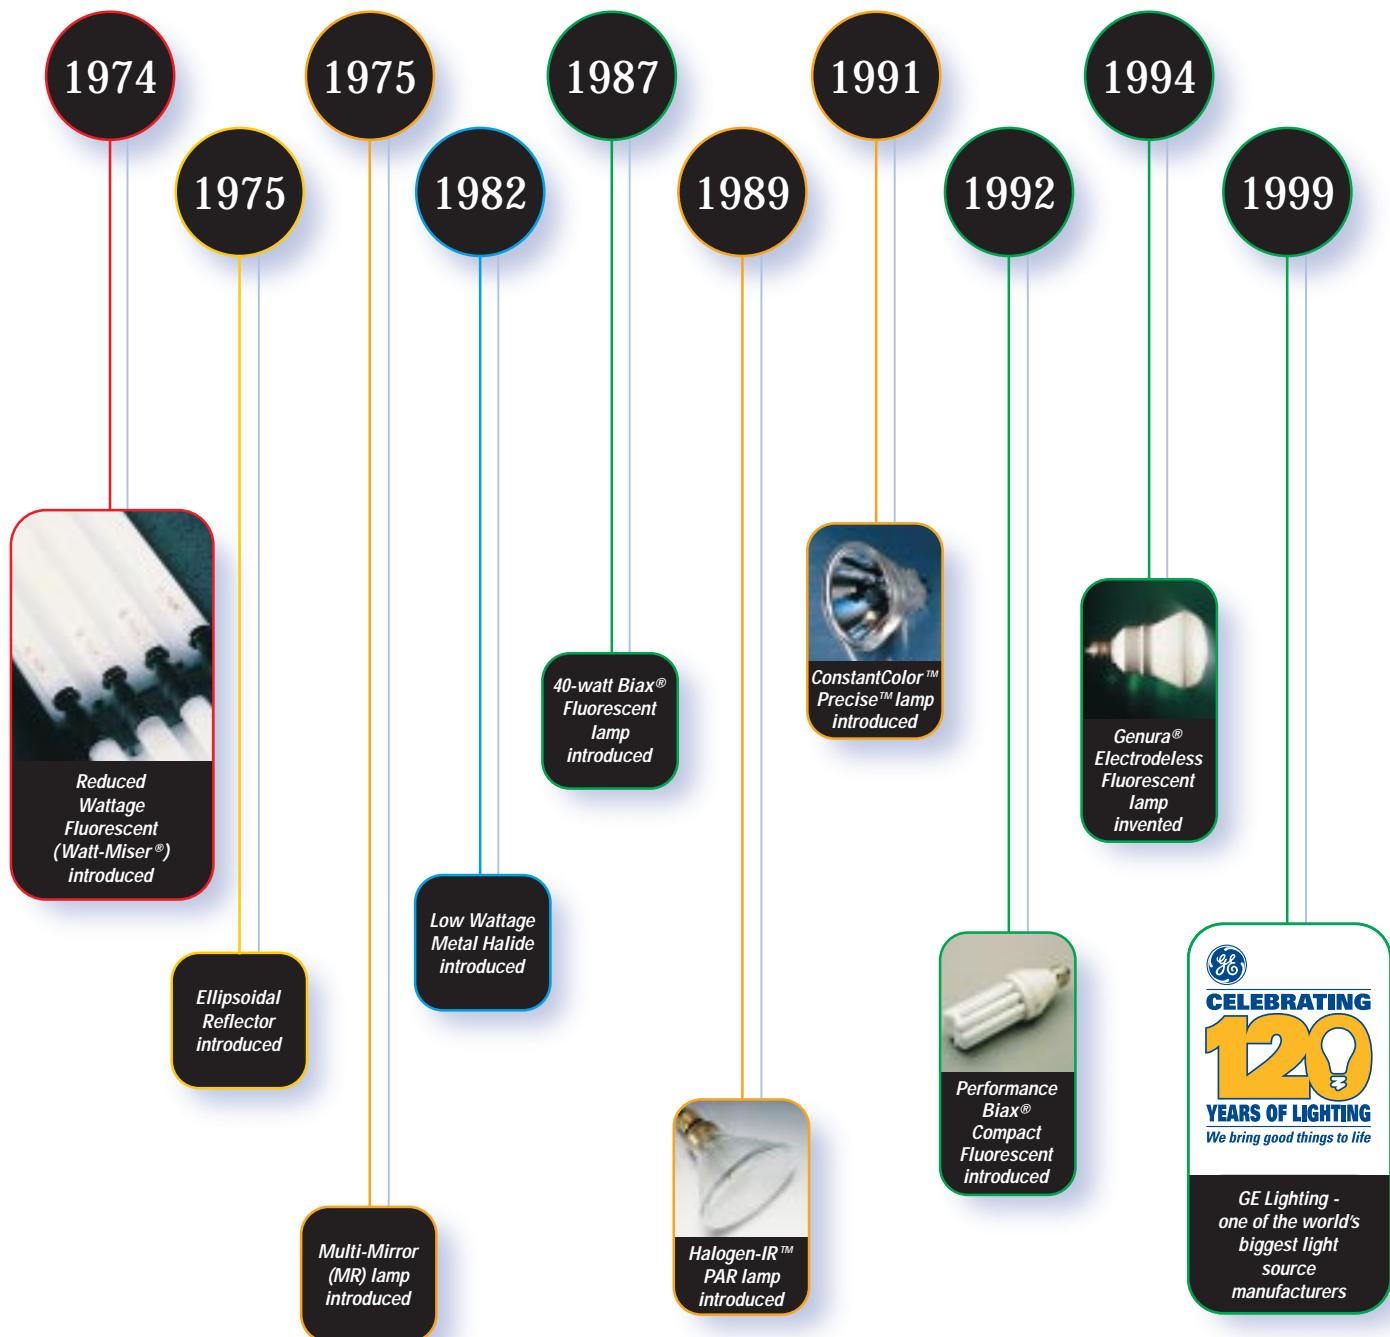

On 21 October, 1879, Thomas A. Edison produced the first incandescent lamp. In honour of his genius this day became known as 'Edison Day' and was widely celebrated all over the States for many years thereafter.

*Source: 'The General Electric Story' 1876 - 1986 - A Hall of History Publication, Schenectady, New York, October 1989, Third Printing - Second Edition.*

## Lamp technology development

*GE's founder, Thomas Edison, invented the first practical incandescent lamp in 1879; today GE Lighting is one of the world's biggest light source manufacturers with a reputation for innovation and quality.*

# The right product

## *Focusing on customers' needs*

*GE's history of technical firsts reflects a consistent focus on providing customers and end users with added value and reduced lighting costs.*

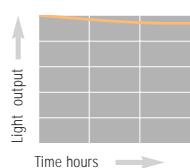

### *Longer life hours & Energy efficiency*

Giving maximum return on your lighting investment.

### *Improved colour rendering*

Enhanced colour performance for an increasingly demanding market.

### *Reduced maintenance costs*

Longer life lamps mean lower labour costs for maintenance - a cost that can be more than the lamps!

### *Consistent colour*

Making lamps that look better for longer, reducing variations when single lamps are replaced.

### *Better lumen maintenance*

Building in energy efficiency and maintaining high standards of illumination.

### *Multi application*

Versatile lamps for use in a wide range of light fittings.

### *New technology*

GE invented fluorescent and halogen lamps as well as Genura, the world's first energy-saving induction lamp in a conventional design.

### *Innovation*

Continuous investment in pushing forward the boundaries of lamp design and efficiency, including the 3 part arc tube for ceramic metal halide lamps.

# ***Lighting - how to save money***

The cost of replacing lamps is often more than the cost of the lamps themselves...

Naturally, you will want to reduce these maintenance costs as much as possible and here GE's long life lamps can significantly help. But all lamp types can offer dramatic savings if the most efficient maintenance and replacement procedure is identified for each application.

## **Installation monitoring - the advantages**

Monitoring and recording the performance of your lighting installation can offer significant cost benefits. By drawing up an installation plan, identifying lamp types, wattages and their installation dates, you can:

- Accurately monitor lamp life and costs
- Identify problem fittings so remedial action can follow
- Easily establish the correct lamp type and wattage when a replacement lamp is required.

## **Replacing lamps and maintenance**

Replacing lamps can be carried out on an individual or bulk basis. The method you select and the time of replacement will depend on factors such as:

- The cost and ease of access
- A requirement to maintain minimum light levels
- The rated life and the lumen maintenance characteristics of the lamps selected

(See Comparing light sources).

## **Maintaining light output**

Lumen maintenance measures a lamp's ability to maintain a consistent light output throughout its life. High lumen maintenance over a given period of time means less lamp replacement is needed to maintain light levels, reducing maintenance costs. Fluorescent lamps also help to reduce installation costs because they eliminate the need to fit extra lamps in order to compensate for falling light output.

### **Cleaning and relamping regularly, extends life, maintains light and reduces energy consumption.**

Over time lumen depreciation of lamp (line 1) combined with dirt build up in luminaire (line 2) means deterioration of total light output (line 3). Cleaning lamps and luminaires extends life.

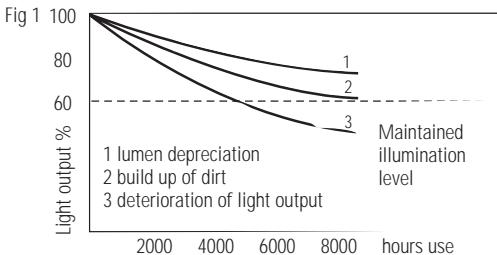

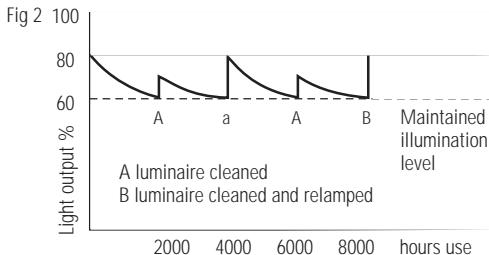

Figure 1 shows total light output (line 3) falling below the maintained illumination level.

Fewer luminaires are required if an installation is regularly maintained. Figure 2 shows 20% energy savings are possible by incorporating a 2000 hour cleaning cycle and a 4000 hour relamping cycle.

## **Energy efficiency classification**

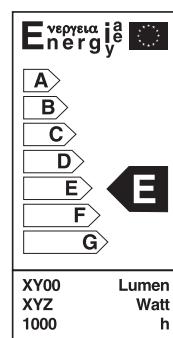

The European Union published a Commission Directive in January 1998 regarding the efficiency labelling of household lamps (98/11/EC) effective 1 July 1999. However a transition period is allowed for lamps displaying the label at retail outlets until 1 January 2001.

The directive requires that all household lamps that are supplied directly from the mains have a label on the product/packaging that indicates the energy efficiency class of lamp (lm/W). Lamps which have a luminous flux of greater than 6,500 lumens are excluded from the labelling requirement. Reflector lamps and those with an input power of less than 4 watts are also excluded.

The classification scheme grades lamps into 7 classes, from **A** to **G**, with class **A** having the highest efficiency.

The scheme classifies lamps as follows:

- A** Triphosphor fluorescent lamps, both linear and pin compact fluorescent. Integral compact fluorescent with electronic ballast
- B** Halophosphate linear fluorescent with electronic ballast. Integral compact fluorescent with magnetic ballast
- C** High efficiency halogen lamps
- D** Other halogen lamps
- E/F** Standard incandescent lamps
- G** Decorative incandescent and others

# Comparing light sources

## *Incandescent*

Incandescent lamps

Incandescent lamps are the most familiar type of light source with countless applications in homes, shops and other commercial settings. Light is produced by passing electric current through a thin wire filament - usually made of tungsten - which glows giving off heat and light. Incandescent lamps have a number of advantages including:

- Low initial cost
- Excellent colour reproduction qualities
- Good optical control over the spread and direction of light
- Flexibility and versatility, with no need for electronic starting and control systems

However, incandescent lamps have a relatively short lamp life (typically 1,000 hours), and over 95% of the energy they produce is converted to heat and only 5% is light. It was these characteristics of incandescent lamps that led to the development of today's higher performance light sources.

Variety, versatility and low cost make incandescent lamps a standard choice.

*Incandescent lamps offer a low initial cost, ease of use and excellent colour reproduction qualities.*

# Halogens

Halogen lamps

Invented by GE Lighting in 1958, halogen lamps provide a compact, high output light source that has revolutionised the world of lighting. Unlike standard incandescent lamps, halogen lamps use a halogen gas which allows the lamps to burn more brightly without sacrificing life. Halogen lamps are more efficient than incandescent lamps at converting electricity into light and therefore give more light from less energy and from a smaller physical size.

Compared to equivalent incandescent lamps, halogen lamps:

- Use energy more efficiently
- Offer a longer life, with up to six times the life expectancy
- Provide a crisper, whiter light
- Provide better beam control, allowing light to be directed with much greater accuracy
- Offer a more compact size, creating new design opportunities.

*Halogen offers amazing light quality, intensity and control.*

*Ideal for display lighting in a range of demanding interiors.*

Crisp, white halogen light creates dramatic effects in retail lighting.

# Comparing light sources

## Fluorescent

### Fluorescent lamps

Fluorescent light is produced when the phosphor coating in the lamp tube converts UV light into visible light, after a gas discharge is created in the tube. This is a highly efficient form of generating light. Because of their large surface area, the light produced by fluorescent lamps is more diffuse and less directional than 'point' sources such as incandescent, halogen and discharge lamps. This quality, plus their high energy efficiency, make fluorescent lamps ideal for lighting large open areas such as offices, commercial, industrial and public buildings.

GE's Polylux XL lamps are high performance triphosphor lamps offering:

- Excellent colour reproduction
- Higher light output for longer - with 95% lumen maintenance
- Longer life (up to 18,000 hours with electronic gear)
- 18% more light output than standard halophosphate tubes.

*GE triphosphor fluorescent lamps are improving working environments with high light output, energy efficiency and excellent colour reproduction.*

Fluorescent tubes are offered in warm and cool white colours, as well as daylight which produce light close to natural light. They are also offered in a choice of coatings, standard halophosphate, where low initial cost is the most important factor, or triphosphor with improved colour rendering and significant energy savings.

Today's high performance fluorescent tubes provide warmer, more natural working environments.

# *Compact Fluorescent*

Compact Fluorescent lamps

Compact fluorescent lamps represent a major breakthrough in fluorescent tube technology. GE Lighting provides advanced compact fluorescents whose size, shape and light distribution match that of standard incandescents - but whose length of life and energy-saving characteristics are those of a fluorescent lamp. The addition of GE amalgam dosing technology ensures that consistent high light output is maintained regardless of temperature changes or angle of installation.

Compared to incandescent lamps, compact fluorescents typically provide:

- The same light output at only 20% of energy consumption
- Up to 10-12 times longer life - and Genura up to 15 times - dramatically reducing operating and maintenance costs.

Energy-saving Biax downlighters replace incandescent lamps in this library.

*Compact fluorescents have led to a new generation of light fittings, providing energy savings and reduced maintenance costs.*

	40W	→	7W/9W
	60W	→	11W
	75W	→	15W
	100W	→	20W
	120W	→	23W

# Comparing light sources

## *High Intensity Discharge*

Discharge lamps

Discharge lamps rely on the light emitted by a gas vapour when electricity is passed through it. They are highly energy efficient and reliable over long periods of time. The range falls into five categories:

- ConstantColor CMH
- Metal Halide Lamps
- High Pressure Sodium Lamps
- Mercury lamps
- Low Pressure Sodium Lamps.

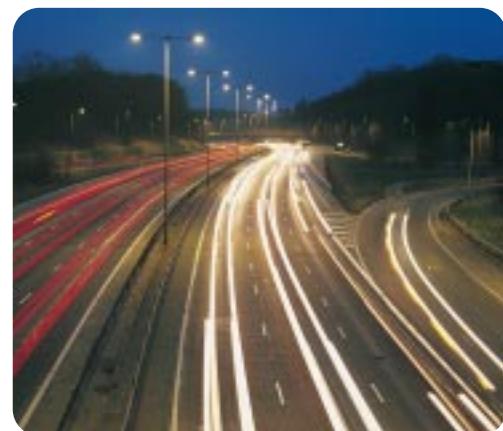

### **ConstantColor CMH**

The latest development in metal halide technology - ceramic metal halide (CMH) - has advanced performance even further. ConstantColor CMH lamps provide a high level of light uniformity from lamp to lamp and over life. This makes them ideal for colour critical areas.

### **Metal Halide lamps**

The metal halide range consists of four easy to use product families - Arcstream®, Kolorarc™, Sportlight™ and Multi-Vapor®. They offer excellent energy efficiency, crisp, white light and excellent colour reproduction for lighting:

- Retail displays
- High bay industrial areas
- Sports lighting and floodlighting.

High Intensity Discharge lamps provide one of the most cost-effective ways of lighting public spaces.

*The outstanding efficiency, reliability and long life of discharge lamps makes them ideal for retail, roadway and floodlighting applications.*

### **High Pressure Sodium lamps**

HPS lamps are more often used where long-term economics - rather than accurate colour reproduction - are of more importance. They are highly efficient and produce a warm, yellow colour good for lighting:

- Large parks
- Shopping malls
- Roadways
- Amenity areas.

### **Mercury lamps**

Mercury lamps are highly reliable. Although they are not as energy efficient as other discharge lamps, and provide reduced colour reproduction, they require simpler starting and operating control circuits. This offers significant installation, operating and maintenance savings in applications such as:

- Road lighting
- Security lighting
- Landscape lighting.

### **Low Pressure Sodium lamps**

These lamps are extremely efficient for applications where economical operation over long periods is critical. They offer qualities perfectly suited to street lighting:

- Familiar monochromatic yellow light
- A three year life in normal use
- Superb energy efficiency.

A striking combination of white uplighters with warm yellow downlighters at the Hotel Kempinski, Munich Airport, Germany.

## Incandescent Lamps

GE incandescent lamps come in all shapes and sizes, covering the whole spectrum of user needs and give particular qualities of light or suit particular applications. From GE you get more variety in incandescent lamps than you would ever have thought possible.

Decorative incandescent lamps used to create a warm inviting ambience at a cafe in New York

## Halogen lamps

GE invented and marketed the world's first halogen lamp in 1958.

Halogen lamps provide outstanding light quality - the crisp white light delivers superior colour reproduction. They are more energy efficient than conventional incandescent lamps and offer a longer life - all within a compact size.

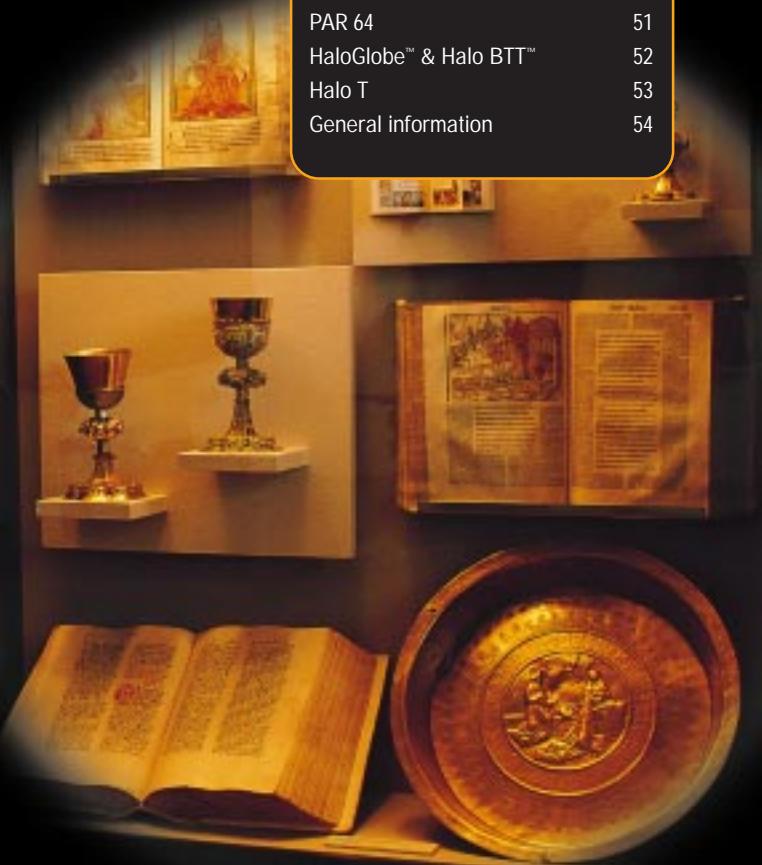

Other features include outstanding beam control, UV control, heat reflective coatings that protect display items and a unique 'twist and lock' cap which makes installation easy and safe.

Close beam control and excellent colour reproduction make halogen the lamp of choice for display lighting

# Understanding product data

## Product identification

The following glossary of terms and descriptions can help you when checking halogen lamp specifications and explains how to use the order codes when ordering products. Within each product line, lamps are divided into families - within families, lamps are listed by wattage.

*If you're looking for halogen, aim for a Precise solution*

Precise MR16

Precise MR11

- Cool, white light, precise beam control, excellent colour performance and a lamp life of up to 6,000 hours.
- Ideal for retail display lighting, decorative lighting and spotlighting of individual features - including heat sensitive items.
- Choose from a wide range of beam angles and select Precise MR16 lamps for ultra - violet control.

Halogen uplighters, downlighters and spotlights at the Bang & Olufsen Centre, Copenhagen, Denmark.

#### Applications:

retail display lighting, decorative lighting and spotlighting of individual features.

#### Choose:

##### Precise ConstantColor

for consistent light quality and exceptional long life.

##### Precise Bright

for outstanding light output in a mid range lamp.

##### Precise Alutech

for all your heat sensitive halogen fixtures.

##### Precise MR11

for high output, light quality and long life in an extra compact form.

#### Range of beam angles

GE Precise MR16 lamps offer a choice of nominal beam angles from 8° to 60°. The range of beam angles can be used to either highlight single features with a tight focus or provide a wash of ambient lighting, with a variety of effects achievable with intermediate beams.

# Precise™ MR16 & MR11

## Precise™ ConstantColor™

### The long lasting premium quality halogen lamp.

The Precise ConstantColor lamp features revolutionary GE Thin Film Technology to give consistent light output for up to the 6000 hour life of the lamp. The advanced coating is designed to withstand temperatures of up to 500°C, making it the ideal choice for long-term reliability and consistent light quality.

## Precise™ Bright

### Outstanding light output and beam quality in a mid range lamp.

Precise Bright sets new performance standards for mid-range halogen lamps, offering outstanding long life for a mid-range product. Its advanced, computer-designed reflector gives a smooth beam and outstanding light output compared to similar lamps. Precise Bright is available in both open and closed forms.

- Up to 6000 hours life
- 99-98% Lumen maintenance
- Double sided dichroic coating
- With UV control
- The most consistent light output available

- Up to 4000 hours life
- Outstanding light output and beam quality from a mid-range lamp
- Upgraded reflector
- UV control in both open and closed formats

## Precise<sup>TM</sup> Alutech<sup>TM</sup>

### The perfect choice for heat sensitive halogen fixtures.

For many years finding a halogen lamp suitable for high technology electronic fixtures was a problem. Precise Alutech is the answer. With a GE developed aluminium coating, almost all of the heat is reflected away from the fixture. Throwing heat forward has advantages in downlighters like minimising heat build up in ceiling voids.

## Precise<sup>TM</sup> MR11

### The extra compact, high performance halogen lamp.

GE Precise MR11's pack the high output, light quality and long life of halogen into an extra compact form, making them ideal where space is at a premium.

- Heat reflected forward
- Ideal for heat sensitive fixtures
- 3000 hours life
- With UV control

- Extra-compact 35 mm size - perfect for lighting cabinet displays
- 3500 hours life
- Closed lamps with UV control

# Twist & Lock

GE's Twist And Lock's tough mechanical bond and greater electrical contact between lamp and base means:

No retaining springs or rings to fit or release - offering faster lamp installation and replacement;

No risk of arcing - improving electrical reliability and safety.

**TAL 50** lamps are 50 mm dichroic mirror lamps with ConstantColor coatings to give exceptional long life and consistent light quality.

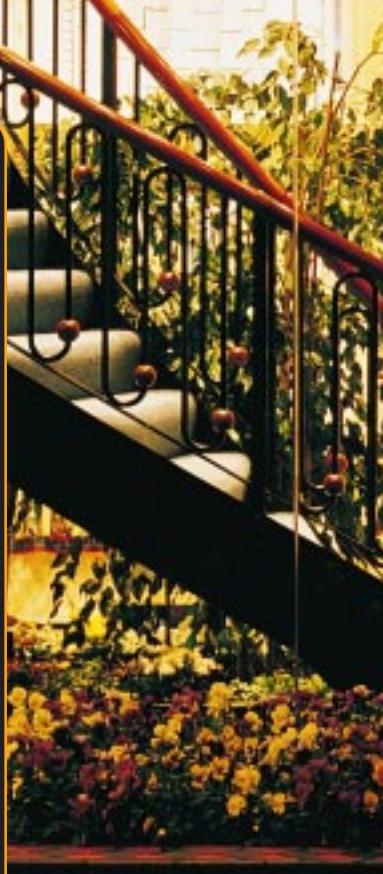

**3,500 hours life**  
up to 50% longer than standard dichroic lamps.

**98% lumen maintenance**  
producing near maximum light output even at 3,500 hours.

**Consistent white light**  
with no colour shift throughout the rated life of the lamp.

**TAL 100** lamps are 100 mm reflector lamps designed for long life and extra high light intensity.

**Up to 3,500 hours life**  
**Exceptional light intensity**  
up to 17% higher than the nearest compatible lamp.

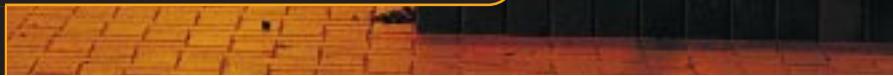

TAL downlighters welcome visitors to Timothy Guy Design's studio in Truro, UK.

TAL 50

## Installing halogen? GE's Twist & Lock make it easy

- *GE's unique Twist and Lock (TAL) system enables you to locate the lamp with one simple, foolproof action.*
- *The first low voltage halogen lamp designed for easy installation.*
- *No more installation problems or poor connections caused by bent or broken connecting pins, so no more wasted lamps.*

# Halogen

*All the power, quality  
and precision of  
halogen - with  
UV control*

UV Control Capsules

- *The ultra violet light emitted by standard halogen lamps can cause fading or bleaching of sensitive display items.*
- *GE's UV Control Capsules significantly reduce the effect of bleaching by minimising UV-B and UV-C radiation.*

Choose ultra violet control for accent lighting of light sensitive display items.

#### Applications:

retail, display and task lighting.

GE's UV Control Capsules give maximum light output and colour quality.

Range includes axial filament types for use in linear miniature reflectors and uplighters, providing:

**Wide, smooth beam** with accurate light cut-off - perfect for uniform lighting effects.

**Maximum versatility** - common light-centres across a range of wattages let you use one light fitting design for a range of applications.

*Choose Halogen-IR technology and start saving money*

- *GE Halogen-IR (Infra-red) lamps use a unique GE POW-IR - Film coating that increases lamp efficiency by more than 25%.*
- *These lamps also turn invisible infra-red light into extra visible light.*

'The Old Bank'  
Happit store façade,  
energy-saving  
exterior  
floodlighting in  
London, UK.

**Applications:**  
retail, displays,  
reception areas and  
exterior floodlighting.

Halogen-IR Linear

GE's Halogen IR is one of the most efficient halogen lamps in the world.

A whiter light with excellent colour rendering.  
Maximum light where you need it.

GE's HIR Linear offers you:

**Up to 25% energy savings**  
for the same light output.

**Up to 25% less heat output**  
than a standard halogen linear.

## *Upgrade to GE Halogen using your existing light fittings*

- *GE Halogen PAR lamps are a range of direct replacements for standard incandescent reflector lamps.*
- *GE Halogen PAR lamps run on mains voltage, so you no longer need transformers or extra wiring to enjoy the crisp white light and energy-saving properties of halogen.*

Halogen PAR puts the performance of halogen into your existing light fittings.

### **Applications:**

retail, displays,  
museums, conference rooms,  
private offices and  
residential interior lighting.

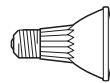

GE PAR 20 and PAR 30 lamps are cost-saving direct replacements for 63 mm and 95 mm incandescent reflector lamps.

**They offer you:**  
Up to 150% longer life  
Up to 50% energy savings  
**Cool white light**  
with excellent colour rendering and a cool beam.  
**Maximum light**  
where you need it.

# HaloGlobe™ & Halo BTT™

HaloGlobe  
Halo BTT

*Beauty and cost-saving for your decorative lights*

- *GE HaloGlobe and Halo BTT lamps combine the efficiency, economy and performance of halogen with classic lamp good looks.*
- *Higher light output and improved colour rendering make them ideal in the most demanding locations.*

GE HaloGlobe - the replacement for Decor 95 mm lamps is available in clear and white, 60, 100 and 150W.

GE Halo BTT - the replacement for GLS lamps is available in clear, 60 and 100W.

**Crisper, whiter light**  
with improved colour rendering.

**Improved efficiency**  
with up to 50% more light for the same energy consumption.

**Save maintenance costs**  
with up to two times longer life.

**Versatility and flexibility**  
You can install these lamps at any angle with no reduction in lamp life.

**Easy installation**  
HaloGlobe and Halo BTT - with their outer glass covers, can be handled like any ordinary GLS lamp.

HaloGlobe lamps complement the classical architecture of the Cafe Hungaria, Budapest, Hungary.

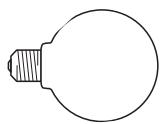

## Applications:

hotels, pubs, restaurants, offices,  
retail and residential.

## Halogen

# Halogen lamps

Halogen lamps provide a compact, high output light source popular for accent, display and general lighting applications in a wide variety of commercial, industrial and residential environments.

## Choosing the right lamp

To help you achieve the most effective spread and level of illumination for your particular application, use the performance cones shown in this catalogue.

## Assessing performance cones

Performance cones show the area, strength and distribution of light produced by each lamp. This varies according to the level of illuminance produced by the lamp (lux), the height of the lamp above the object being illuminated, and the beam angle of the lamp selected.

## Selecting power and beam

Comparing performance cones lets you select the correct lamp for your needs. For example, GE's most commonly used mirror lamp, the 50W EXZ Precise MR16 ConstantColor with a beam angle of 27°, would produce 700 lux at 2 metres height with a beam diameter of 0.9 metres.

If, however, you wanted a smaller beam diameter of say 0.4 metres, the 20W spot beam ESX with its narrower 13° beam angle would be more effective, producing 838 lux. This would provide 15% extra luminance with a 60% reduction in energy consumption.

## Selecting beam angles

GE halogen lamps are offered in a range of beam angles from 7° to 60°. Choose small beam angles to highlight single features with a tight focus or wide beam angles to provide a wash of ambient lighting, with a variety of effects achievable with intermediate beams.

Figure 1  
Choosing the right power and beam

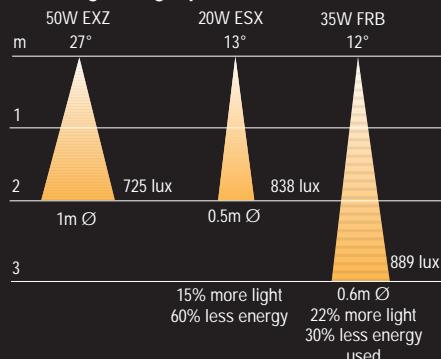

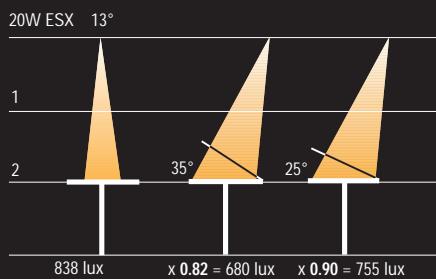

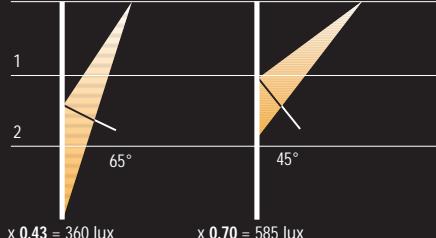

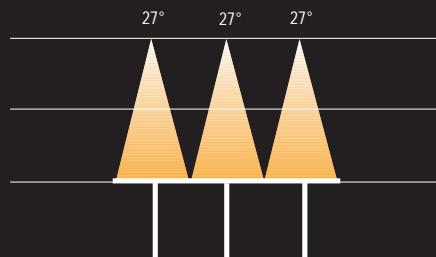

Figure 2  
Choosing beam angles

20W ESX

3 x 50W EXZ lamps

## Uniform performance

The performance cones can also provide a quick guide for achieving uniformity of illuminance on a horizontal plane

### Select UV control

Tungsten Halogen lamps emit ultra violet rays similar to sunlight. Although the level of ultra violet emitted by halogen lamps is far lower - for example 8 hours in an office lit by halogen is equivalent to 10 minutes' sun - eliminating these emissions is a sensible precaution. Choosing UV control halogen lamps effectively eliminates UV-C and greatly reduces UV-B radiation.

### How to achieve maximum lamp performance

Most instances of early failure of halogen lamps are caused by incorrect installation. The risk of early failure will be reduced if you observe the following points:

- **Damage** such as bent pins and cracks in the ceramic base caused by rough handling during installation.
- **Poor electrical contact** between pins and lampholder which can lead to arcing. This is usually a result of insufficient insertion of the pins into the lamp holder.
- **Finger grease** on the quartz bulb which creates local hot spots and can lead to disintegration of the glass. Note this problem is avoided with sealed mirror lamps as the bulb is protected from handling.
- **Over voltage** - running a lamp at higher than rated voltage for prolonged periods can substantially reduce life. For example, a 5% increase in rated lamp voltage can lead to a 50% reduction in lamp life. If problems occur the voltage should be checked at the lamp base and the rating of the transformer should be checked against the lamp load applied.

- **Overheating** is usually caused by insufficient ventilation or cooling of the lamp and can be the result of poorly designed lamp fittings or installation.

- **Open lamps** should only be used within a luminaire with a protective shield.

### Atmospheric factors

In harsh atmospheric conditions we would recommend ConstantColor which has a much more resilient coating plus the added advantage of 6000 hours.

Humidity does not normally present a problem with dichroic lamps, however early lamp failure can occur in areas of high humidity such as in kitchens, bathrooms and swimming pools. In these applications, fittings should be chosen with a moisture resistance or IP rating, appropriate to the environmental conditions in which they will be used.

Narrow-focus halogen light used to create striking display highlights at a fashion outlet on Avenue De Montaigne, Paris, France.

## Fluorescent lamps

GE offers you the benefits of nearly 60 years' experience in the design and manufacture of fluorescent lamps. Our comprehensive range of lamps continues to set new standards in light output, quality and efficiency and is available in a wide choice of lengths, wattages and colours.

Choose GE fluorescents for extra long lamp life, excellent lumen maintenance, improved colour performance and higher light output.

Low operating costs, energy efficiency and long life make fluorescent tubes the preferred lighting option for many office and commercial interiors

## Description

Very warm, similar to incandescent light. Gives a warm effect in restaurants, hotels etc.

Warm, gives a homely welcoming effect. Used in restaurants, hotels, offices and supermarkets.

Intermediate colour, used in general, commercial and industrial lighting.

Creates cool atmosphere in commercial installations. Recommended for hospitals.

Very cool. Popular in warmer climates.

Very warm, similar to incandescent light. Gives a warm effect in restaurants, hotels etc.

Warm, gives a homely welcoming effect. Used in restaurants, hotels, offices and supermarkets.

Intermediate colour, used in general, commercial and industrial lighting.

Creates cool atmosphere in commercial installations. Recommended for hospitals.

Creates warm effect while giving excellent colour rendering for colour matching and reproduction work.

Creates cool effect while giving excellent colour rendering for colour matching and reproduction work.

Warm, used in commercial or public buildings to create a "warm" atmosphere.

Intermediate colour, standard colour for almost all applications.

Cool, used in offices and shops. Higher colour rendering, but less efficient than cool white.

Cool, used to create a cooler atmosphere in offices, factories and shops.

Very cool. Popular in warmer climates.

Intermediate colour, used for food displays in shops and supermarkets. Also used in florists.

Cool, used for sunlight effect in medical applications.

Wide spectrum output (including UV). Used for colour work in shops, printing, labs etc.

Cool wintry effect, similar to artificial daylight. Used in jewellers, furriers and colour work.

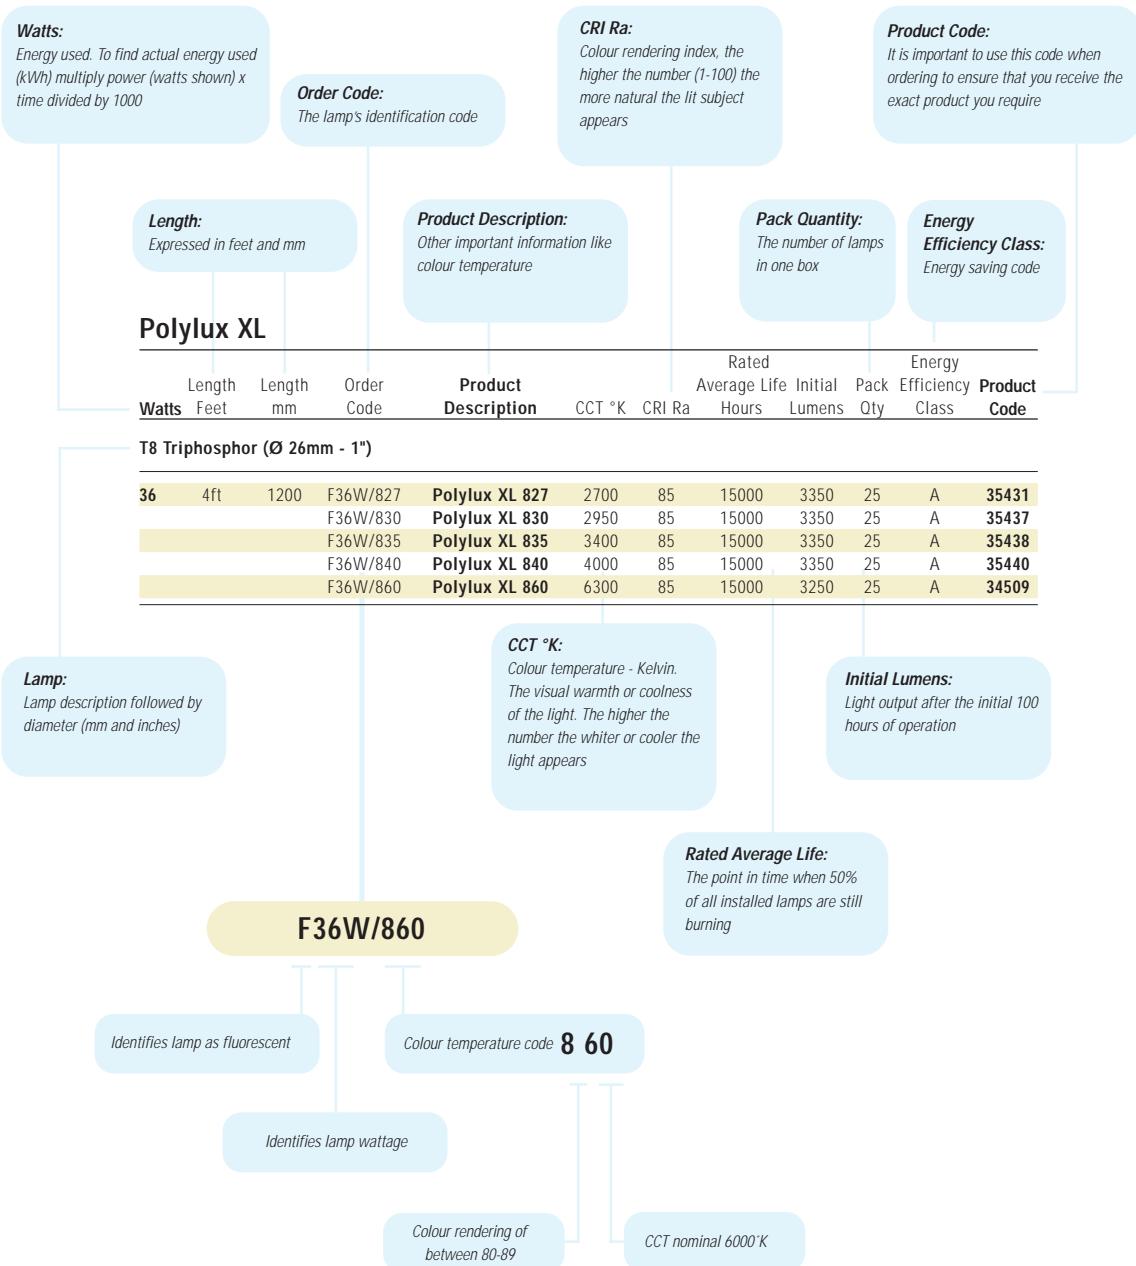

Small amount of visible light with long wave UV-A radiation emitted to attract insects into insect traps.

Only long wave UV produced. Used decoratively in disco's as the UV makes white fabrics fluoresce.

# Understanding product data

## Product identification

The following glossary of terms and descriptions can help you when checking fluorescent lamp specifications and explains how to use the order codes when ordering products. Within each product line, lamps are divided into families - within families, lamps are listed by wattage.

# Fluorescent

*For cost-efficiency,  
energy-saving and  
a better quality of  
light - switch on to  
Polylux XL*

Polylux XL

- *Polylux XL provides more light for longer with a choice of conventional or electronic gear.*
- *Rated life of 15,000 hours (conventional gear) and 18,000 hours (electronic).*
- *95% light output is maintained throughout the lamp's life.*
- *Enhanced colour rendering ability plus a range of colour options.*

Polylux XL provides warm natural colour for a more comfortable office environment.

#### Applications:

retail, office areas,  
commercial, industrial  
and sports halls.

Polylux XL beats standard halophosphate lamps for light output, energy-efficiency and length of life.

- You need just 48 Polylux XL lamps to maintain the same light level at a given time as 64 halophosphate lamps.
- Polylux XL provides more light than standard lamps, better energy utilisation and lasts longer.

# Polylux XL - GE's triphosphor fluorescent tubes offers

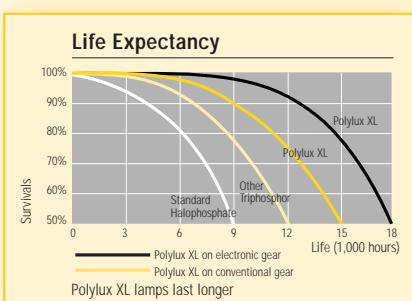

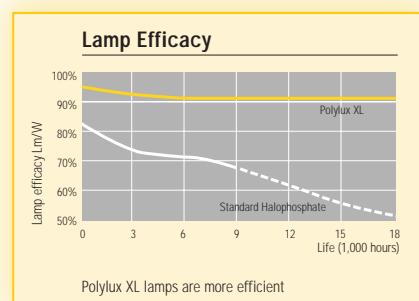

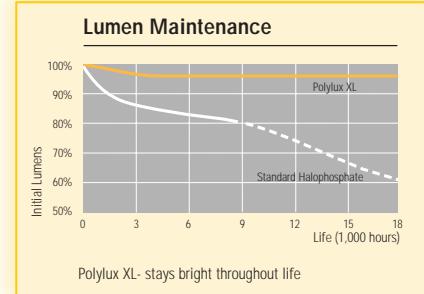

- A better quality light
- A brighter light
- A consistently high light level
- A longer life performance
- A more productive and efficient lighting solution

Long Life -	High Quality Light -
<ul style="list-style-type: none"> <li>• Extended relamping cycles</li> <li>• Fewer costly spot replacements</li> <li>• Reduced disruption and production downtime</li> <li>• Reduced relamping in difficult to access areas</li> </ul>	<ul style="list-style-type: none"> <li>• Well lit surroundings</li> <li>• Consistently maintained light levels</li> <li>• Excellent colour rendering</li> <li>• Enhanced performance between maintenance schedules</li> </ul>

## Lower cost of light

Upgrading to Polylux XL lamps on electronic ballast means twice the life of a standard halophosphate tube and up to 12.5% longer life than other triphosphor lamps on the market.

Polylux XL lamps can result in extended relamping cycles, which significantly reduce maintenance costs.

# Polylux XL

GE Polylux XL lamps will change the way you think about fluorescent lighting. With its advanced triphosphor coating, Polylux XL offers outstanding colour reproduction, making people look more natural and colours more vibrant and true. Compared to standard halophosphate lamps, Polylux XL provides more light for longer, ensuring brighter, more consistent light in a wide range of applications.

827 Extra Warm White (2,700°K)

830 Warm White (2,950°K)

835 White (3,400°K)

840 Cool White (4,000°K)

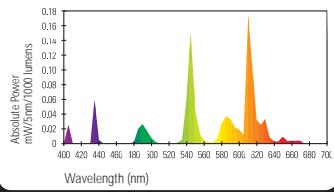

860 Daylight (6,300°K)

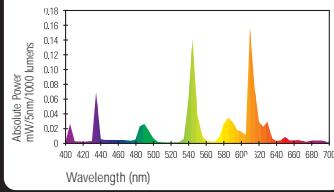

## Spectral Distribution

Spectral Power distribution curves provide the user with a visual profile of the colour characteristics of a light source. Fluorescent lamps combine a continuous spectra from their phosphor with the line spectra of mercury discharge.

# Fluorescent lamps

Fluorescent lamps provide a much more dispersed light than 'point' sources such as incandescent, halogen or discharge lamps. This quality, along with their outstanding energy efficiency, make them ideally suited for lighting large open areas such as offices and industrial buildings.

Standard fluorescent lamps use halophosphate lamp coatings. These lamps are used where low initial cost is the most important factor. However, higher performance lamps using triphosphor coatings, such as GE's Polylux XL lamps, are now increasingly being used as they provide better colour rendering and significant energy savings.

## The effects of switching

Frequent switching of fluorescent lamps can reduce their operational life. The graph, Fig 1 below, shows the effect on a lamp's life of different switching cycles.

Although a lamp that is only switched on and off rarely will last longer, light output does fall in the latter stage of a lamp's life.

## The effects of temperature change

Fluorescent lamps are designed to produce their optimum light output at an ambient temperature of 25°C. However, when installed in a lamp

fitting, the temperature of the air surrounding a lamp can change and affect the light output of the lamp. The effects of changes in ambient temperature for a typical lamp are shown in the graph, Fig 2 below.

## Using electronic ballasts

The efficiency of fluorescent lamps can be improved by increasing the frequency of the mains voltage supplied to them. Electronic ballasts and controls can be used to increase the normal mains frequency of 50/60Hz to 25/30KHz improving lamp efficiency by approximately 10%. Electronic ballasts also consume less power than conventional ballasts and when combined with other efficiency benefits, electronic ballasts can achieve power savings of around 20% compared to conventional 50/60Hz systems with the same light output levels.

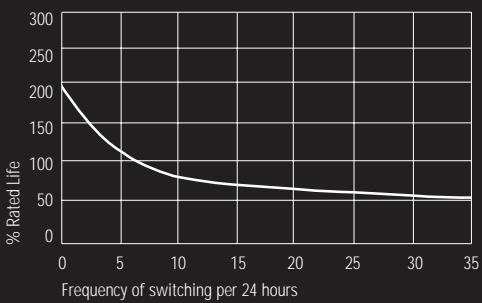

## Light-output data

The lumen output figures quoted are measured at 25°C in accordance with EN60081 and EN60901.

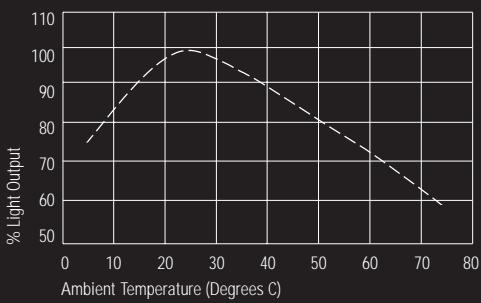

## Caution notice

Handle and install all fluorescent lamps with care. Turn off power before installing lamps.

**Fig 1** Effect on life of different switching cycles

**Fig 2** Light output relative to ambient temperature

## Compact Fluorescent lamps

GE's compact fluorescent lamps give you more light and less heat, converting up to 25% of the electricity they use into light (incandescent lamps convert just 5% into light and the remaining 95% into heat). Because they use less energy you pay less for your lighting. They also last up to ten times as long as incandescent lamps, so you spend less on maintenance.

Whilst you save on cost with GE compact fluorescents, you lose nothing in quality. Colours are reproduced accurately and flicker-free light output is maintained for the whole of the lamp's life.

Energy-saving compact fluorescents cut the cost of providing constant light in public access areas

# Understanding product data

## Product identification

The following glossary of terms and descriptions can help you when checking compact fluorescent lamp specifications and explains how to use the order codes when ordering products. Within each product line, lamps are divided into families - within families, lamps are listed by wattage.

## Compact Fluorescent

## *90% lumen output - even at extreme temperatures*

Biax T

- *GE compact fluorescent lamps with amalgam technology give you high light output despite intense cold and intense heat.*

- *Ideal for outdoor installations.*

- *More light per unit of energy consumed.*

- *GE Biax with amalgam even lets you install your lamp at any angle with no loss of light output.*

Energy-saving compact fluorescent lamps providing consistent performance in all weathers.

### **Applications:**

retail, displays, reception areas, interior and exterior lighting.

Biax lamps use GE's new amalgam dosing technology to give a consistent high output through life, irrespective of variations in temperature and the angles of installation. Choose Biax - in a wide range of shapes, formats and outputs - to suit all your compact fluorescent needs.

Rapid start and flicker-free operation.

Wide range of compact fluorescent lamps with amalgam.

GE offers amalgam not only in its traditional CFL range, but also for unique products such as 2D lamps.

Light output independent of orientation.

GE's CFLs offer the same light output in any burning position, letting the application - not the lamp - dictate the format and design of luminaires.

Still produces 90% of maximum light output at extremes of temperature. GE's CFLs with amalgam still produce 90% of maximum light output at temperatures down to -6°C and as high as +65°C.

Dramatically improved lumen efficiency in enclosed luminaires. Near perfect optical transparency means there's no need to over specify lamps for lumen loss, providing further savings in capital and running costs.

# Biax®

**Biax®**

*GE Biax lamps offer up to 80% energy savings compared to equivalent incandescent lamps and last up to 10 times longer.*

***Biax® L***

- Stretched full length source with 4 pin base designed for 600mm square light fittings
- Replaces linear fluorescents twice the length
- Single-ended for simpler installation
- Round loop construction means no dark ends
- High surface brightness for improved optical control
- Polylux phosphors allow matching with other fluorescents

***Biax® S & S/E***

- Biax S with 2 pin base and extra compact design to suit reduced size fittings
- Biax S/E with 4 pin base and external starter / controls for use with electronic control gear and dimming and emergency lighting applications
- 5 times more efficient than GLS lamps
- 9 times less maintenance compared to GLS lamps
- High colour rendering - matching the colour temperatures of incandescents

***Biax® D & D/E***

- 2 pin or 4 pin formats
- Light quality and colour performance to match other fluorescents
- High colour reproduction performance, providing rich, vibrant colours
- Wide range of wattages to suit all applications

***Biax® T & T/E***

- High colour reproduction performance, providing rich, vibrant colours
- Consistent high light output, irrespective of ambient temperature and the angle of installation
- New slimmer 49mm base

***Biax® Q/E***

- 4 pin lamp base
- Unique eight-legged design providing high output in even more compact form
- High colour reproduction performance, providing rich, vibrant colours
- Shorter lamp - ideal for more compact light fitting designs

## *Choose Biax 2D for circular light distribution*

Biax 2D

- A GE developed and patented innovation that provides circular light output.
- Low profile design makes it ideal for wall or ceiling fittings.
- High output in any burning position and at very low or high temperatures.

Biax 2D installed in an attractive slimline light fitting.

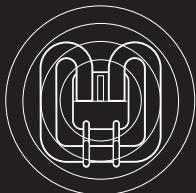

2D's unique shallow, circular format means that light spreads out uniformly all around the lamp with no shadows.

### Biax 2D gives you:

- A more uniform light
- A more attractive light with a range of colours.
- A more versatile light amalgam technology lets you, not the lamp dictate the design of fittings.
- A more efficient light A 2D 16W lamp replaces a 75 watt GLS lamp - saving energy and giving 10 times longer life.

**A more powerful light**  
GE's new Biax 55 Watt 2D gives you high 3900 lumen output in the same 28/38W size.

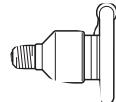

### Applications:

residential lighting  
corridors, security lighting,  
interior and exterior.

## *Install energy-saving light wherever a conventional lamp is fitted*

- Instant retrofit lamps that fit in your existing incandescent lamp fittings.
- Take full advantage of compact fluorescent's long life, energy-saving qualities.

An energy-saving Biax decorative globe provides all the beauty and warmth of a standard incandescent lamp.

### Applications:

retail, displays, reception areas,  
restaurants and residential  
interior lighting.

Electronic Globe

Electronic Biax T

Easy installation - with conventional screw or bayonet fittings - and a wide range of wattages to match incandescent lamps, mean you can add energy-saving GE Electronic Biax lamps almost anywhere.

### GE Electronic Biax lamps offer:

**10,000 - 12,000 hours life**  
10-12 times longer than a standard GLS lamp.

**Warm colour**  
to match incandescent lamps.

**Energy-saving up to 80%**  
compared to GLS lamps.

**Rapid start and flicker-free operation**

**Immediate retrofit**  
replaces incandescent reflector lamps.

# Electronic Biax®

*GE Electronic Biax lamps offer up to 80% energy savings compared to equivalent incandescent lamps and last up to 12 times longer.*

## *Electronic Biax® M & D*

- Fits straight into incandescent fittings
- Warm colour to match incandescent lamps
- High colour reproduction performance, providing rich, vibrant colours

## *Electronic Biax® T*

- Fits straight into incandescent fittings
- High output and short overall length for maximum application versatility
- High colour reproduction performance, providing rich, vibrant colours
- Consistent high light output, irrespective of ambient temperature and the angle of installation
- Round loop construction means no dark ends

## *Electronic Biax® Q*

- Fits straight into incandescent fittings
- High light output with minimum overall length - ideal for compact light fitting designs
- Similar size to incandescent lamps
- Use almost anywhere an incandescent lamp is fitted
- High colour reproduction performance, providing rich, vibrant colours
- Consistent high light output, irrespective of ambient temperature and the angle of installation

## *Electronic Biax® Globes*

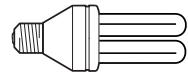

- Fits straight into incandescent fittings
- Light quality to match incandescent globe lamps
- Glass globe construction for strength and professional appearance
- 11, 15 and 20 watt outputs to suit all applications

## *Genura loves life - hates maintenance*

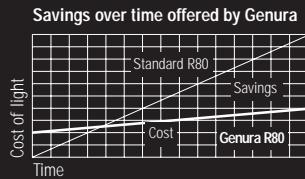

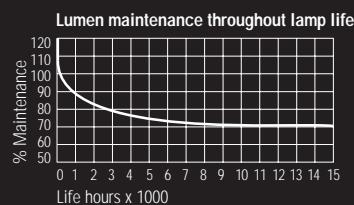

Outstanding 15,000 hours life.

Fast warm-up time of under a minute.

Available in two colour temperatures to suit your lighting requirements.

Cuts lighting maintenance costs with 15,000 hours lamp life\* regardless of switching on and off.

Familiar reflector shape  
Saves up to 80% on energy and therefore effectively pays for itself.

Genura R80

Standard R80

\*According to IEC standard 969.

- *Genura - the unique GE invented lamp that saves up to 80% on energy and gives outstandingly long-life - up to 15 times longer than standard incandescents.*

- *Similar size and shape as a standard incandescent R80 reflector lamp up to 100W, and works with existing fittings.*

- *No compromise on beauty - Genura looks as good as a conventional reflector lamp.*

Low maintenance reflector lamps at Copenhagen Airport, Denmark.

### Applications:

Interior public areas and residential interior lighting.

# General information

## Compact Fluorescent lamps

GE Biax compact fluorescents come in two lamp types - plug-in and electronic. Whilst a majority of the features described here apply to both lamp types, plug in lamps require separate running gear and the gear used can effect the lamp's performance characteristics.

### Warm-up times

GE Biax lamps offer an almost instant start, but require a few minutes to reach full brightness, particularly in colder temperatures. This slight time lag may make the lamp initially appear dull.

### Amalgam technology

GE amalgam dosing technology provides a more consistent light output, not only through lamp life, but also in varying ambient temperatures and lamp orientations.

### Using outside

When Biax lamps are employed outdoors, they must be used in enclosed fittings. The lamps will reach full brightness when the ambient temperature around the lamp reaches approximately 25°C. The effects of different ambient temperatures on light output for typical lamps is shown in the chart Fig 1. With amalgam products, 90% of light output is achieved between the temperatures of -6°C and +65°C.

### Enhancing colour quality

While the colour temperature of Biax is similar to an equivalent incandescent lamp (it produces the same 'whiteness' of light), the colour rendering performance (its ability to accurately reproduce colours) is slightly lower. It is this difference that may lead some users to feel that the light appears dull. However, Biax lamps, which use Polylux triphosphors, are far better at rendering colours than most commonly available fluorescent tubes.

### Characteristics of electronic lamps

#### Dimming of electronic retrofit lamps

As the electronic gear in the base of these lamps needs a full and constant current, they cannot be dimmed or used with other electronic switching devices.

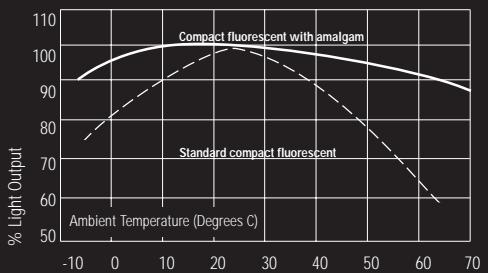

### Eliminating flicker

Biax lamps operate at very high frequencies thus avoiding the annoying flicker typical of some fluorescent installations operating with conventional control gear.

### Using existing fittings

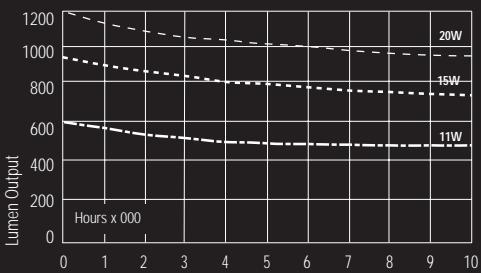

Biax lamps are much lighter than many conventional retrofit compact fluorescent lamps and therefore do not impose exceptional loads on light fittings.

**Fig 1** Light output relative to ambient temperature

Biax maintains an acceptable level of light output within a normal range of temperatures.

Lumen maintenance characteristics of Biax and Electronic Biax lamps

One of the characteristics of Biax is a very low fall off in light output over the life of the lamp.

## High Intensity Discharge lamps (HID)

High intensity discharge lamps offer outstanding efficiency, reliability and versatility with the additional benefit of low operating costs.

The HID range can be broken down into five main lamp categories - ConstantColor CMH, metal halide, high pressure sodium, mercury and low pressure sodium.

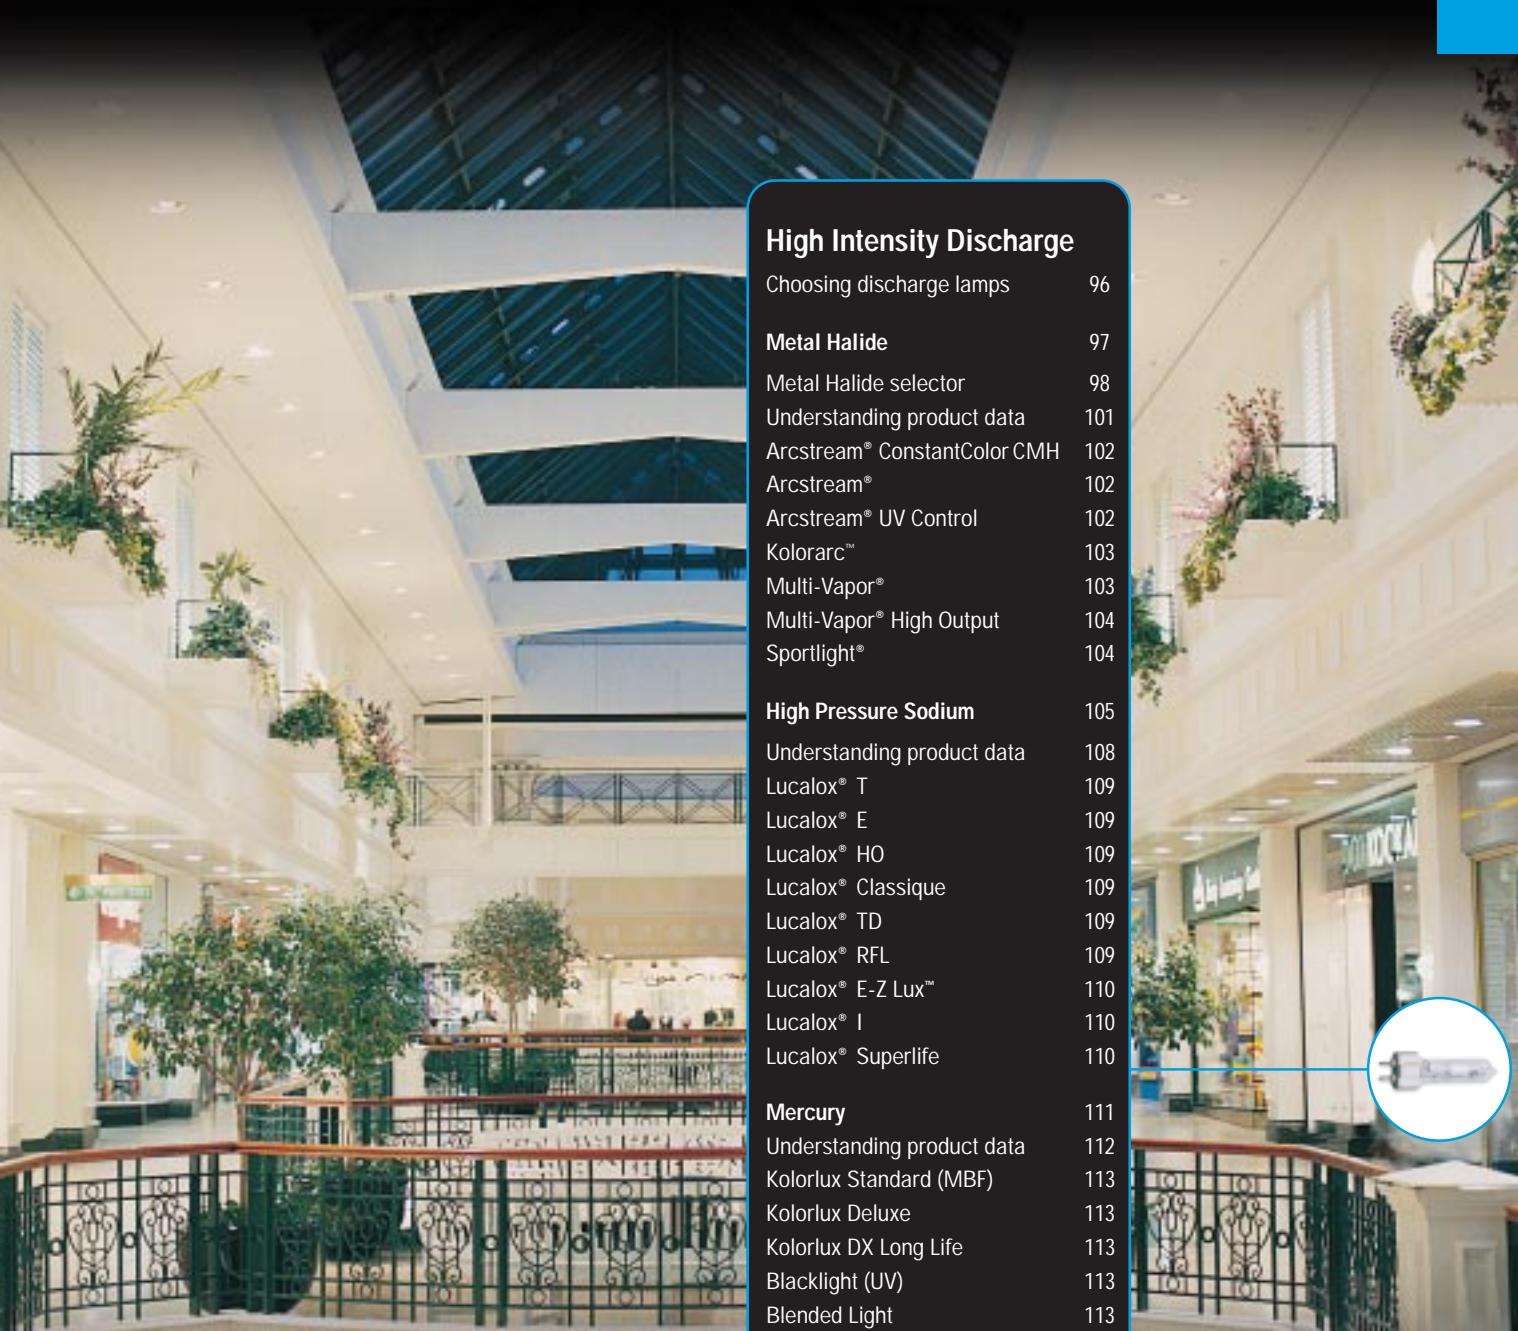

GE invented mercury lamps in 1931\*, high pressure sodium lamps in 1962\* and metal halide in 1964\*. Since their inception GE has continually striven to improve the range and are able to offer a lamp for most applications ranging from outdoor floodlights, street lighting and large industrial complexes as well as effective retail display lighting.

Nearly all HID lamps require a ballast and starting gear. The matrix illustrated on page 96 shows you which lamp category is suitable for which application.

\*Source: 'The General Electric Story' 1876 - 1986 - A Hall of History Publication, Schenectady, New York, October 1989, Third Printing - Second Edition.

HID lamps provide the output and cost-efficiency required in a wide range of indoor and outdoor applications

Meadowhall, Sheffield

# Choosing discharge lamps

## Selecting the right product

While all HID lamps offer outstanding efficiency and long life, there are distinct differences in performance among the five basic types of HID lamps. The following two charts should help you to understand these differences so that you can select the right lamp for your application.

Key performance criteria

	Colour Temperature Options (K)	Colour Rendering (Ra)	Life (Hours)	Efficiency (LPW)
ConstantColor CMH	3000 (WDL)	80+	6,000 - 9,000	90 - 95
Metal Halide	3000 (WDL) 3500 (BDL) 4000 (NDL) 6000 (DL)	65 - 93	3,500 - 20,000	68 - 100
High Pressure Sodium	2000	25 - 60	14,000 - 55,000	66 - 140
Mercury	3500 4000	42 - 52	12,000 - 24,000	19 - 63
Low Pressure Sodium	1800	-	16,000	100 - 198

Best Option      Good Option

Major applications

	Retail Display	Commercial Interior	Sports Lighting	Stadia	High Bay	Industrial	Warehouses	Amenity	Pedestrian Areas	Floodlighting	Security	Street Lighting	Highways	Horticulture
ConstantColor CMH	•	•			•		•	•	•		•	•		
Metal Halide	•	•	•	•	•	•	•	•	•	•	•	•		
High Pressure Sodium					•	•	•	•	•	•	•	•	•	•
Mercury						•	•	•	•	•	•	•	•	
Low Pressure Sodium												•	•	•

## *Choose GE metal halide - and cut through the specification jungle*

- To make lamp selection easier than ever, GE has defined its metal halide range in four distinct groups - Arcstream, Kolorarc, Multi-vapor and Sportlight.

- GE metal halide lamps with their bright, high quality white light and energy - efficiency are ideal for a wide range of applications.

- Constant colour lamp to lamp throughout life.

High quality metal halide light is ideal for illuminating colour critical public spaces such as shopping arcades and walkways.

### Applications:

from retail displays and office interiors to sports and floodlighting.

### Ceramic Metal Halide Innovation

GE's redesigned 5 piece Arc Tube to 3 piece for greater reliability.

GE makes it easy to choose the right metal halide. Simply select the right product family for your task and preferred ballast and you will pinpoint the correct lamp for perfect results.

#### Arcstream

Lamps operate on high pressure sodium / metal halide ballasts incorporating thermal protection (to EN IEC 61167) with metal halide ignitors.

#### Kolorarc

Lamps operate on high pressure mercury ballasts with metal halide ignitor.

#### Multi-Vapor

Lamps operate on Constant Wattage Gear (CWA).

#### Sportlight

Lamps for sports and floodlighting.

# Metal Halide

## *Arcstream®*

Choose Arcstream with metal halide ballasts and ignitors for retail display lighting, high quality exterior floodlighting and anywhere a crisp, white light is required.

- Perfect optical control delivering a highly accurate, quality light precisely where you want it
- Long life up to 9,000 hours
- Excellent colour reproduction making it ideal for display lighting
- Good colour consistency throughout life, so your display maintains its features
- ConstantColor CMH offers a high level of colour stability and performance, making them ideal for colour critical areas

## *Kolorarc™*

Choose Kolorarc with mercury ballasts and metal halide ignitors for commercial and industrial interiors, shopping malls and floodlighting.

- High brightness - providing high illumination levels even when installed in high ceiling areas
- High energy efficiency - offering maximum energy cost savings
- Excellent colour reproduction providing more attractive lighting environments compared to high pressure sodium and mercury arc lamps

## *Multi-Vapor®*

Choose high output Multi-Vapor lamps with constant wattage auto-transformer (CWA) ballasts for large scale commercial and industrial interiors, shopping malls and floodlighting.

- Extra long life - of up to 20,000 hours on CWA gear
- Warm, rich colour - that gives merchandise, furnishings and decor added appeal
- High colour temperatures - to blend exceptionally well in mixed applications with incandescent, halogen and warm white fluorescent sources

## *Sportlight®*

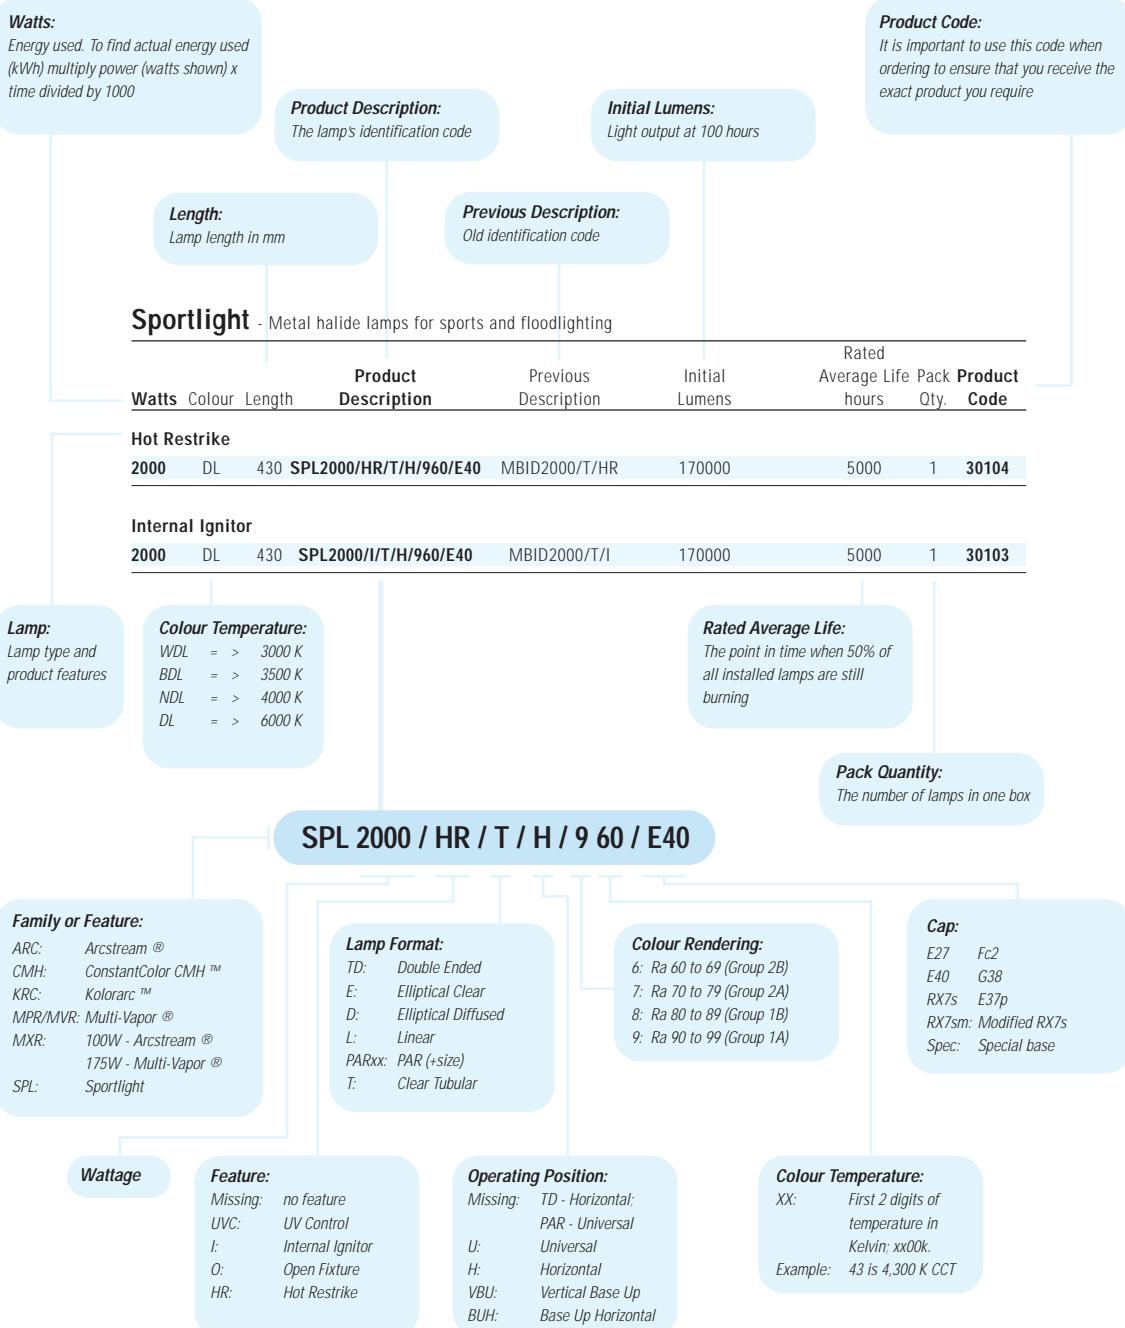

Choose Sportlight high wattage lamps for sports and floodlighting. The excellent colour rendering and appearance of these lamps makes them especially suitable where television cameras are used.

- Excellent optical control - with minimal beam spread even at long focal lengths
- High output - providing high illumination levels even from high towers
- Excellent colour performance - accurately reproducing colours to create more authentic and attractive floodlit environments

# Understanding product data

## Metal Halide identification

The following glossary of terms and descriptions can help you when checking metal halide lamp specifications and how to use the order codes when ordering products. Within each product line, lamps are divided into families - within families, lamps are listed by wattage.

# High Intensity Discharge

## Metal Halide

<sup>1</sup> Vertical orientation      <sup>2</sup> Suitable for open fixtures

Open Fixtures: For lamps operated in the vertical position that are not designated "Enclosed Fixtures only," lamp may be used in an open or enclosed lighting fixture depending upon the application and operating environment. For example, if the lamp is located near combustible material or in an area which is unoccupied for extended periods, an enclosed fixture which can contain fragments of hot quartz or glass is recommended. For more information, contact your fixture manufacturer.

Notes: (Please refer to technical catalogue for appropriate ballast and ignitors). Sportlight lamps are only suitable in fully enclosed fixtures, where fixture lens/diffuser material must be able to contain fragments of hot quartz or glass (up to 1100°C).

# Lucalox® High Pressure Sodium

*Low operating costs,  
long useful life,  
energy-efficient  
performance*

- *High efficiency-up to 150 lumens per watt-converting more energy into light, cutting energy and operating costs.*
- *Outstanding life - up to 28,500 hours substantially reducing lamp maintenance and replacement costs.*
- *Lamps that start out bright and stay that way, offering high maintained lumens over life.*

Lucalox lamps offer an economical means of providing safety for both motorists and pedestrians.

#### Applications:

Ideal for lighting sports halls, warehouses, pedestrian areas, road lighting, industrial & commercial installations and plant cultivation.

GE's patented Amalgam Reservoir assures long life and high maintained light output.

Controlling voltage rise is the key to long life in high pressure sodium lamps.

GE's unique reservoir design achieves this control by ensuring only the precise amount of sodium/mercury amalgam vapor is delivered to the arc tube throughout lamp life.

The result is longer life, less lamp blackening and exceptional lumen maintenance.

# *Lucalox® High Pressure Sodium*

S P E C T R U M

## *Lucalox® Standard*

**The highly efficient, long-life lamp**

- Ideal for streetlighting, commercial and industrial use
- Wide range of wattages and sizes
- Up to 28,500 hours life
- Highly efficient, producing 140 lumens per watt

## *Lucalox® HO*

**The extra high output and long-life lamp**

- Extra light - up to 20% more lumens
- Long life of up to 28,500 hours
- Highly efficient, producing 150 lumens per watt

## *Lucalox® Classique*

**The colour performance lamp**

- Improved quality colour reproduction extends applications to interiors and floodlighting
- Complements standard incandescent and HPS light sources
- Retrofits in standard high pressure sodium sockets eliminating need for different fixtures

# Lucalox® High Pressure Sodium

## *Lucalox® Internal Ignitor*

The efficient, long-life replacement of incandescent light fittings

- Simple - luminaires only need regular HPS ballast, simpler luminaire designs can be used
- Efficiency and long-life from a simple and versatile retrofit lamp
- Compact - enables use of small fixture lighting systems

## *Lucalox® TD (Double-ended)*

Lucalox efficiency in an ultra compact size

- Compact size - small size fits ultra compact fixtures
- Excellent optimal control - delivers a concentrated beam of light exactly where needed
- High efficiency
- Long life

## *Lucalox® E-Z Lux™*

Converts mercury sockets to highly efficient high pressure sodium lighting

- Direct replacement for mercury lamps - operates on mercury ballasts
- More efficient, higher lumens than mercury - 14% energy cost savings - 40%+ more light

## *Lucalox® Superlife*

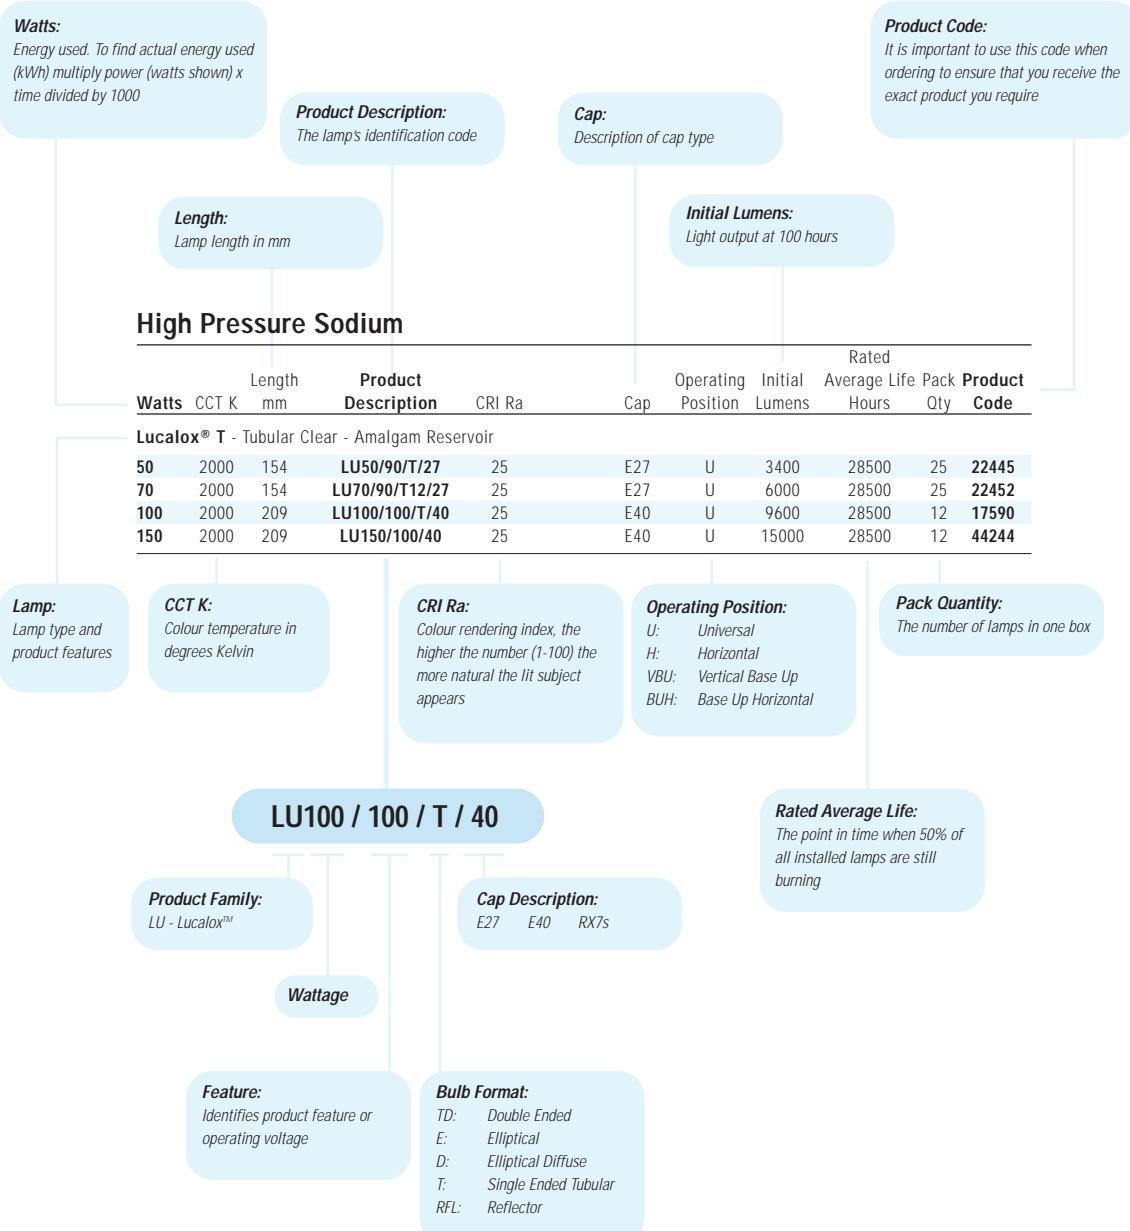

Extra arc tube provides light instantly after power interruption

- "Superlife" arc tube provides light instantly after momentary power interruption, and will increase to full output in 1-2 minutes
- Longest life - dual arc tubes provide up to 55,000 hour rated life

## High Pressure Sodium identification

The following glossary of terms and descriptions can help you when checking high pressure sodium lamp specifications and explains how to use the order codes when ordering products. Within each product line, lamps are divided into families - within families, lamps are listed by wattage.

### GE Lucalox Lamp

- Nickel Alloy Cap**  
Corrosion free, good electrical contact throughout life and moisture damage is eliminated
- High maintained light output**
- Shorter re-strike time**  
Than either metal halide or mercury lamps
- Starts and operates at temperatures as low as -40°C**
- Provides a warm golden light**
- Average rated life of up to 28,500Hrs**  
Increased to 55,000 for Superlife versions. Offering lower replacement costs

**Lamp Cap Identification**  
Helps measure the lamp's performance over time

- Clean Arc Tube**  
Highest efficiency/lowest operating costs among the High Intensity Discharge (HID) product range with acceptable colour rendering
- Amalgam Reservoir**  
Keeps more sodium for longer, slowing voltage rise and increasing lifespan

# Kolorlux Mercury

*High quality colour  
from a versatile  
range of lamps*

Kolorlux

- *Ideal for commercial, industrial and outdoor applications with a wide choice of lamp types and ratings.*
- *Good colour rendering.*
- *Modest installation and running costs.*

Good colour performance, long-term reliability and low operating costs mean mercury lamps are widely used in industrial lighting.

#### Applications:

for internal and external commercial and industrial applications, amenity and security lighting.

The Kolorlux range offers six different types of mercury lamp, each with their own particular qualities.

#### Kolorlux Standard

Traffic and industrial lamps.

#### Kolorlux Deluxe

Warm colour and enhanced light output for indoor and outdoor applications.

#### Kolorlux DX Long Life

Meeting IEC and ANSI specifications for applications demanding standard US spec.

#### Blended Light

An alternative to incandescent requiring no control gear and giving warm white light with good energy efficiency.

#### Mercury Reflector

Provides excellent downward light distribution with high resistance to degradation from dust and dirt.

#### Blacklight (UV)

Emits long-wave UV creating fluorescence making it ideal for research and special effects.

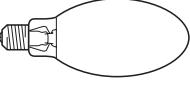

## Mercury and Low Pressure Sodium identification

The following glossary of terms and descriptions can help you when checking mercury and low pressure sodium lamp specifications and explains how to use the order codes when ordering products. Within each product line, lamps are divided into families - within families, lamps are listed by wattage.

Watts:	Energy used. To find actual energy used (kWh) multiply power (watts shown) x time divided by 1000									
Product Description:	The lamp's identification code									
Operating Position:	Orientation of lamp									
Length:	Lamp length in mm									
Initial Lumens:	Light output at 100 hours									
<b>Mercury</b>

### GE SOX-Plus Lamp - Driven by Six Sigma Quality

- Low Conductivity Mica Support
- Better Electrodes – Improved coating technique through Statistical Process Control  
Superior conditioning through better activation of emitter material  
Sodium resistant sleeving
- Improved Gas Filling Better lamp starting due to Statistical Process Control of purity and pressure fill gas  
High vacuum insulation in outer jacket

- Smooth Arc-Tube  
No pitting of surface by features that may act as weak points  
No indentations for sodium to evaporate over lamp life and reduce efficacy  
Minimal discolouration of sodium resistant coating due to improved manufacturing process
- Graduated Insulating Coating  
Optimises lamp energy balance
- Reliable Metal Top Clip  
Robust to vibration in poor weather conditions  
Mica spacer for low heat conductivity from arc-tube

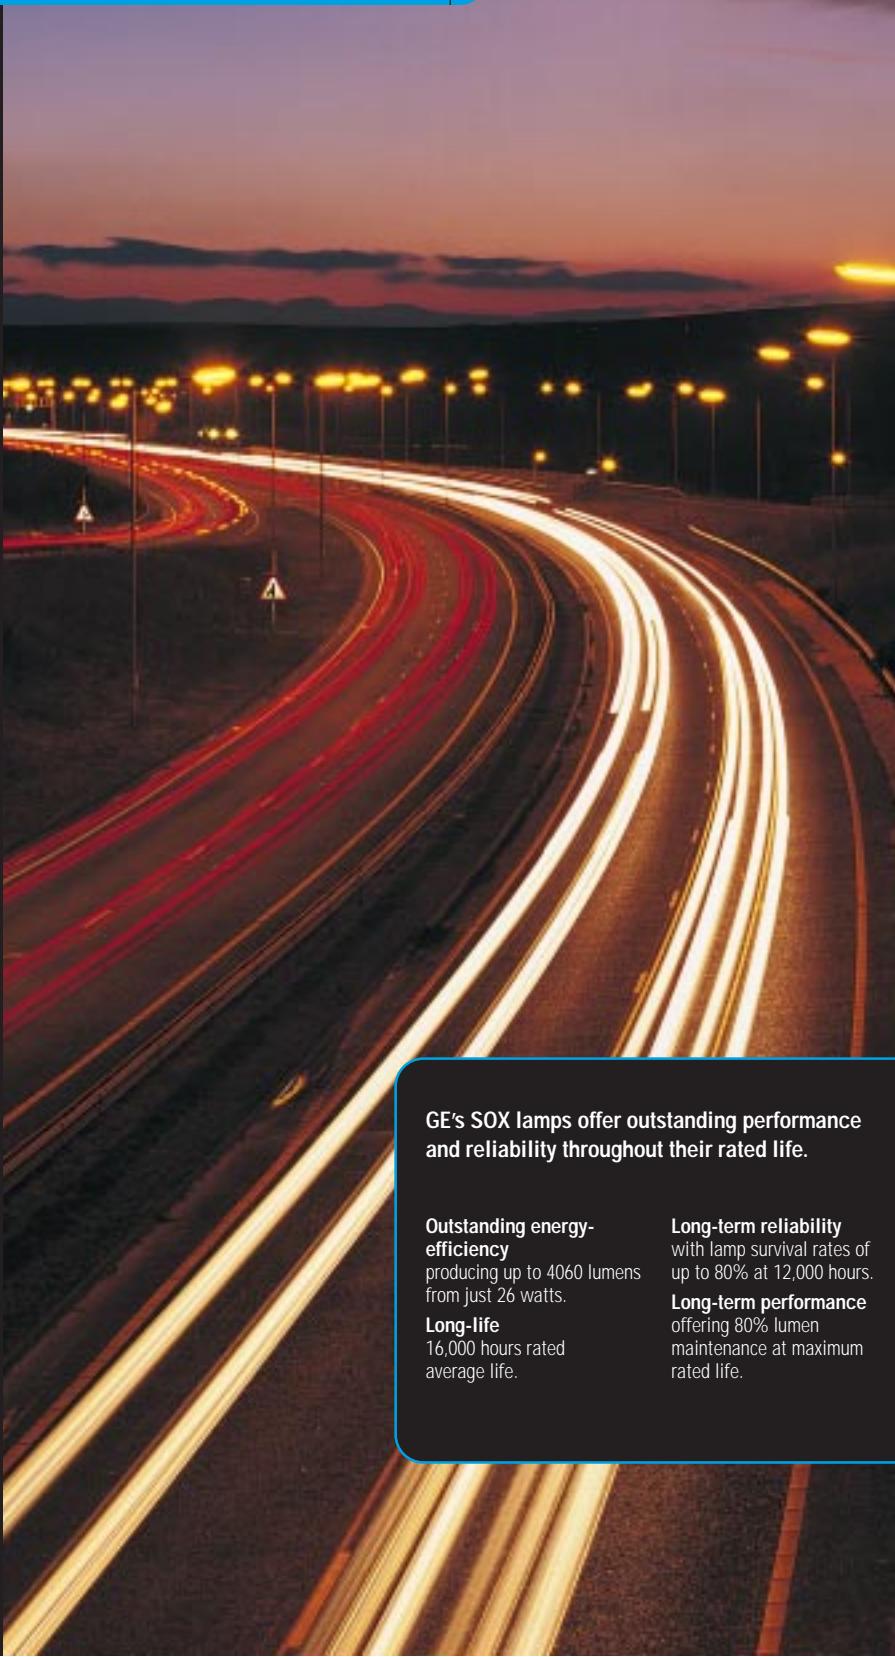

## Energy-efficiency and reliability through life

SOX

- *GE's SOX lamps produce light at wavelengths close to the peak sensitivity of the human eye and so provide one of the most efficient types of artificial light.*
- *Particularly suitable where long operating hours are demanded such as lighting roads, tunnels and pathways, where SOX lamps' remarkably low-energy/high output characteristics make them a cost-effective choice.*

Low pressure sodium lamps are ultra energy efficient and produce a familiar, yellow light.

GE's SOX lamps offer outstanding performance and reliability throughout their rated life.

**Outstanding energy-efficiency**  
producing up to 4060 lumens from just 26 watts.

**Long-life**  
16,000 hours rated average life.

**Long-term reliability**  
with lamp survival rates of up to 80% at 12,000 hours.  
**Long-term performance**  
offering 80% lumen maintenance at maximum rated life.

### Applications:

roads, tunnels and walkways.

This cross-reference does not necessarily represent the full listing of lamps offered in alternative brands.

## *Discharge lamps*

## Reducing run-up times

When a discharge lamp is switched on, current first flows through the starting gas of the arc tube. The heat generated vaporises the mercury, sodium or halide filling until the operating conditions are achieved. This is known as the run-up. The run-up period can take several minutes before the lamp stabilises and produces the correct amount of light and colour. The table shows the typical times for both run-up and re-strike. Run-up times are the time it takes for the lamp to reach 90% of normal light output. Re-strike time is based upon lamps that have fully

run-up and then receive a momentary break in the supply voltage.

Both run-up times and re-strike times will vary according to location, the type of light fitting used and the ambient temperature.

Most discharge lamps other than mercury and multi-vapor lamps are started by a high voltage pulse supplied by a separate ignitor which is turned off once the lamp has started. External starting simplifies lamp construction and is very reliable.

# General information

## Calculating the life of lamps

All life ratings for GE high intensity discharge lamps are expressed in terms of 'Rated Average Life Hours'. This means the number of burning hours until 50% of a given installation of lamps can be expected to have burned out or to have ceased operating within published specifications. These ratings are based on lamps using approved control gear and burning at least ten hours per lamp start-up. Lamps burning less than ten hours per start will have a reduced Rated Average Life (typically 25% reduction for each burning cycle reduction of 50%).

## Lamp quality standards

GE Lighting discharge lamps comply with the following standards:

- IEC 188 High Pressure Mercury Vapour Lamps
- IEC 192 Low Pressure Sodium Vapour Lamps
- IEC 662 High Pressure Sodium Vapour Lamps
- IEC 1167 Metal Halide Lamps

## Operating temperatures

GE Lighting discharge lamps will start at temperatures down to -20°C (-40°C for Lucalox and -30°C for Compact Metal Halide).

## Supply voltages

All lamps, unless noted to the contrary, are suitable for European and UK supplies using suitable control gear. Lamps will start and operate with a 10% reduction in rated supply voltage provided the correct control gear is used. However, in order to maximise lamp survival, lumen maintenance and colour uniformity, it is recommended that the supply voltage and ballast design voltage should be within ± 3%.

## Switching lamps on and off

Continuous operation of mercury and metal halide lamps may increase the risk of lamp failure and a switch-off should be introduced at least every 24 hours.

## Fuses

For recommended fuse and MCB ratings for discharge lamps please refer to the publication 'Fuse Ratings for Discharge Lamps' available from your local GE Lighting Sales Office.

## Further information

The GE Lighting Technical Catalogue in English provides more detailed information on the products listed. The local GE Lighting Sales office will be pleased to provide you with a copy of this catalogue at your request.
